Hi Jackie

Lumo Energy is a member of the ERAA and supports the positions made in their submission.

In particular, Lumo Energy has the following key concerns:

- The implementation date – Lumo Energy recommend that AEMO delay the implementation of these Procedures until at least 1 September 2015.
- The interrelationship with the Meter Contestability Rule Changes – Lumo Energy agrees with the ERAA position that the proposed rule changes and the proposed procedure changes are inconsistent. Therefore, the potential ability for small customers (existing type 5 & 6) to receive a type 4 meter in the future will be disincentivised under the proposed procedure. Lumo Energy considers this a poor customer outcome.

Lumo Energy would like AEMO to quantify the detriment caused to customers with the existing process, should AEMO continue with the Procedure as proposed.

Should you have any questions relating to the Lumo Energy position on this matter, please feel free to contact me.

Regards

Stef
