

IESS Settlement industry transition and Q&A session

Integrating Energy Storage Systems
5 October 2023

Welcome

Ulrika Lindholm

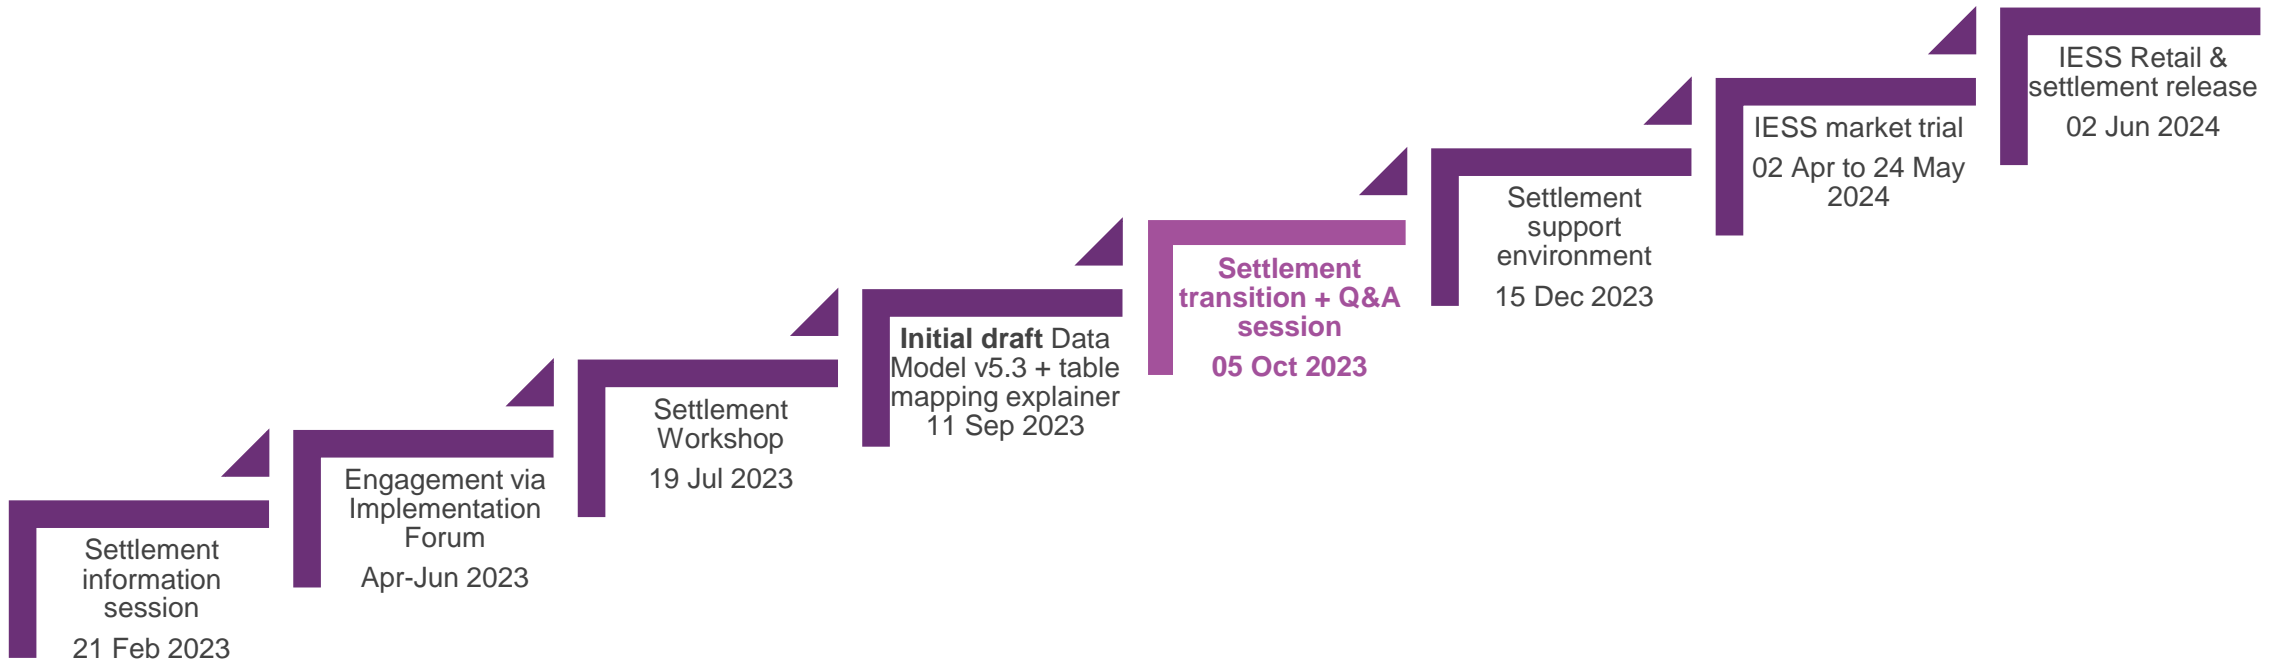

We acknowledge the Traditional Owners of country throughout Australia and recognise their continuing connection to land, waters and culture.

We pay respect to their Elders past, present and emerging.

Engagement on settlement changes

AEMO thanks stakeholders for their participation and feedback received to date.

*Refer to IESS Glossary in Appendix A for full list of acronyms

Ongoing industry readiness engagement via the NEM Reform [Implementation Forum](#) and 1to1 conversations.

Introductions

Session purpose

- Provide an overview of how the transition to new settlement arrangements will work for market participants
- Discuss how AEMO intends to support them during development and transition
- Opportunity to seek clarification in conversation with AEMO's Settlement subject matter experts.

Ways of collaborating

Questions and comments are welcome throughout the session, either in the chat or by raising your virtual hand. There will be breaks to verbally answer questions throughout the presentation.

Please introduce yourself (name & organisation) before you speak.

AGENDA

#	Timing (AEST)	Topic	Objective	Presenter(s)
1	1:00 – 1:05 PM	Welcome		Ulrika Lindholm
2	1:05 – 1:10 PM	Context		Chris Muffett
3	1:10 – 1:30 PM	Changes to settlements	<ul style="list-style-type: none"> Overview of changes, focusing on updates and key areas of clarification 	Darren Gatty
4	1:30 – 1:40 PM	Participant support	<ul style="list-style-type: none"> Walk through and discussion of how AEMO will support participants during development and transition 	Chris Muffett
5	1:40 – 2:00 PM	Industry transition	<ul style="list-style-type: none"> Overview of how transition will work for participants How participants will be supported across new and legacy data structures 	Darren Gatty
6	2:00 – 2:25 PM	Q&A	<ul style="list-style-type: none"> Open Q&A to clarify changes and discuss considerations for participant support and industry transition 	All
7	2:25 – 2:30 PM	Next steps & close		Ulrika Lindholm

APPENDICES

A	IESS glossary
B	AEMO competition law meeting protocol

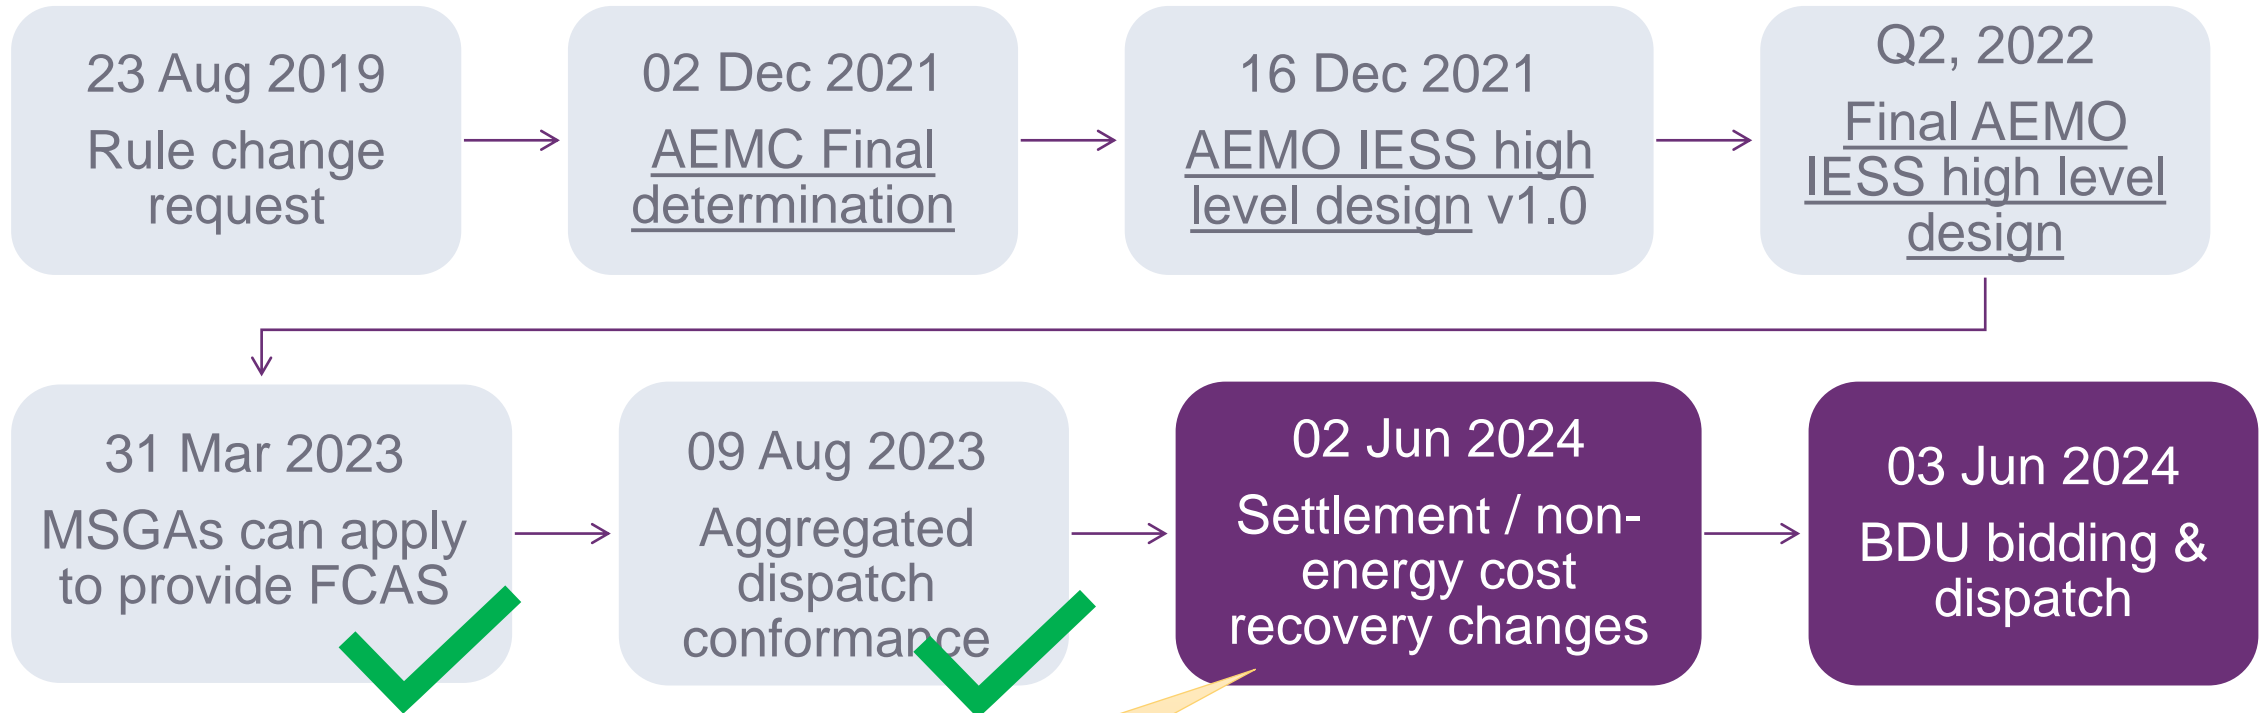

"Please note that this meeting will be recorded by AEMO and may be accessed and used for the purposes of publishing it on the external NEM Reform Program webpage as a resource for industry participants. By attending the meeting, you consent to AEMO recording the meeting and using the recording for this purpose. No other recording of the meeting is permitted"

Context

Chris Muffett

BACKGROUND: IESS high-level Timeline

MSGA	Market small generation aggregator
FCAS	Frequency control ancillary service/s
IRP	Integrated resource provider
BDU	Bidirectional unit

This document relates to Settlement changes

- REFERENCES**
- [AEMC IESS rule change](#)
 - [AEMC Implementing IESS rule change](#)
 - [AEMO IESS High Level Design and Implementation Strawperson](#)
 - [AEMO IESS Participant Toolbox](#)

IESS major changes summary

Key IESS changes relate to how batteries are to be registered, connected and managed in AEMO's systems:

- A new Integrated Resource Provider (IRP) participant registration type replaces the current requirement to register separately as both a Market Customer and Market Generator when connecting a battery
- A single DUID is to be used in the bidding and dispatch of both the battery charging and discharge, which replaces the current requirement for separate DUIDs for each energy direction from the battery
- A single NMI is to be used in the energy settlement, which replaces the current dual NMI configuration that sees the generation and load recorded against different NMIs and separated in the current settlement process

REFRESHER: Major settlement changes

I ESS rule significantly alters the calculation method used for **Non-Energy Cost Recovery** (NECR) items:

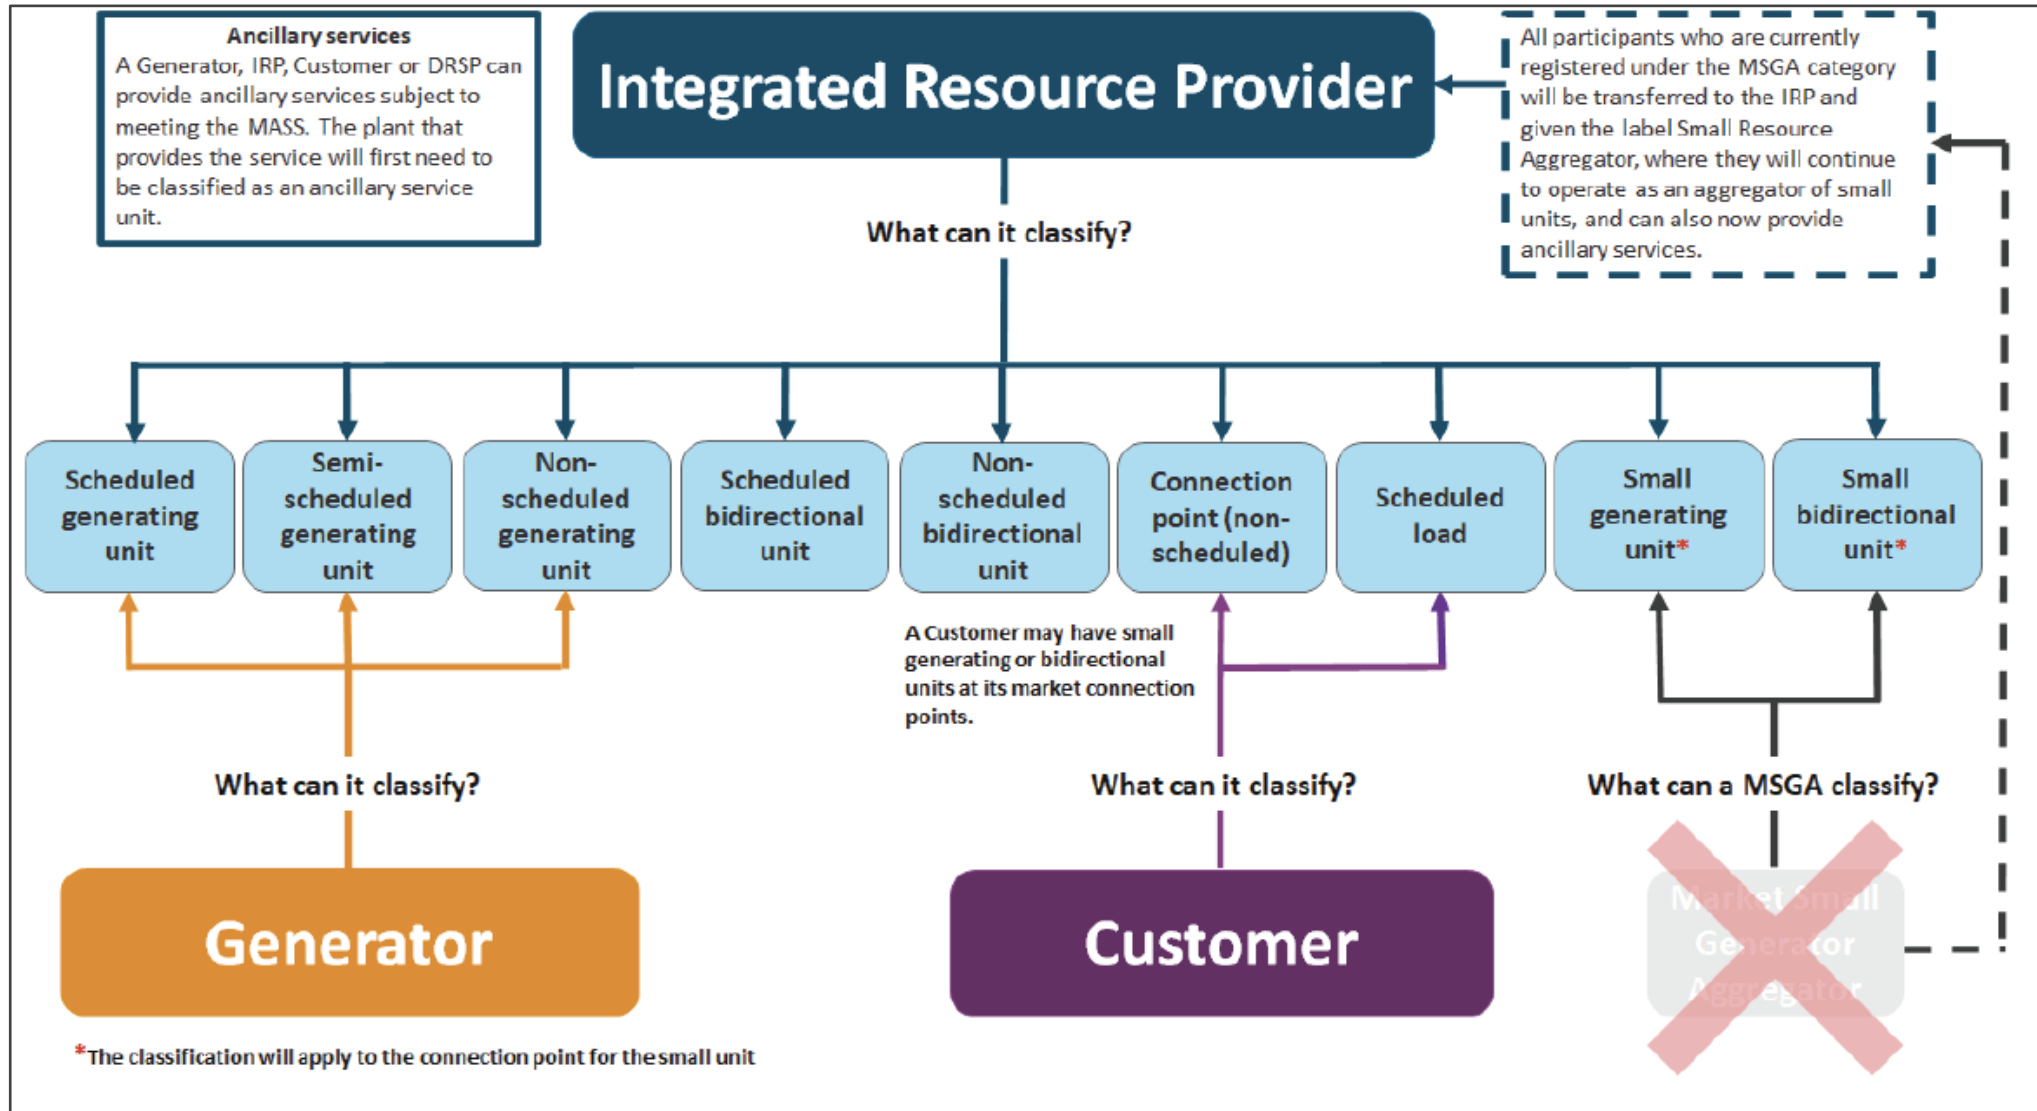

- Recovery calculations are to consider the gross (consumption separate from generation) energy amounts of all participants, rather than currently using net energy (generation – consumption) of specific participant types.
- **Major AEMO database structure changes** required to enable the new calculations, these changes will flow into the Data Model and affect participant reconciliation and reporting activities and also AEMO data provision.
- Embedded network management needs to change to ensure that the parent has the appropriate gross energy volumes available for settlement, which has resulted in the netting of children reads moving to AEMO's Metering system.

I ESS rule:

- **Does** change the non-energy cost recovery calculations
- **Does not** change the calculations for settlement of base energy
- **Does not** change metering data interfaces or most NMI reconciliation “RM” reports
- **Does** change the MMS Data Model data structures related to the Settlement of base energy, potentially affecting participants' downstream processes.

IRP classification from 02 June 2024

Changes to Settlements

Darren Gatty

Contents of this section

- IESS settlement related changes:
 - Data flow
 - Data model tables
 - New energy transactions table fields
 - New genset detail table example
 - Comparative examples of energy settlements
 - Non-energy cost recovery changes
 - Embedded network management calculations
 - Settlement Report (SR) changes

Data flow changes from 02 Jun 2024

Current Data Structure:

Participant Type	Market Customer	Market Customer (Battery - Load Only)	Market Generator (Battery - Gen Only)	Market Generator	Market Small Generator Aggregator
MSATS Configuration	AggFlag = Y Class: SMALL, etc	AggFlag = Y Class: WHOLESAL	AggFlag = N Class: GENERATR	AggFlag = N Class: GENERATR	AggFlag = Y Class: NREG (PID must end *SGA)
Reads Received	Aggregate Reads (imports & exports)	Aggregate Reads (exports only)	Individual Reads (imports only)	Individual Reads (imports & exports)	Aggregate Reads (imports & exports)
Table Reads Settled In	setcpdata	setcpdata	setgendata	setgendata	setsmallgendata
Billing Week Summary	billingcpdata	billingcpdata	billinggendata	billinggendata	billinggendata

- The current data split into 3 settlement tables allows separation of the participant types for things like data requests and fee calculations
- With IESS all reads will be settled via a single **Energy Transactions** table, with an IRP registered participant able to have all of these read types
- Market registered batteries will be updated for IESS to have a single NMI and DUID, as shown below

IESS Data Structure:

Participant Type	Market Customer	IRP (Single NMI / DUID for Battery)	Market Generator	IRP
MSATS Configuration	AggFlag = Y Class: SMALL, etc	AggFlag = N Class: TIRS, DIRS	AggFlag = N Class: GENERATR, etc	AggFlag = Y Class: NREG
Reads Received	Aggregate Reads (imports & exports)	Individual Reads (imports & exports)	Individual Reads (imports & exports)	Aggregate Reads (imports & exports)

IESS data model table changes

- Draft data model spec [EMMS Data Model 5.3-Initial Specification V.01](#) is now available
- Below table has been updated with the data model table names e.g. Settlements.Energy_Transactions replaced by SET_ENERGY_TRANSACTIONS
- Previously shown tables ENERGY_CUSTOMER/GENERATOR_SUMMATY removed as identified as internal tables only, not available in data model

Current Tables*	Replacement Tables**
SETCPDATA	SET_ENERGY_TRANSACTIONS (table for settling all ACE & ASOE, by ParticipantID/ConnectionPointID) SET_ENERGY_GENSET_DETAIL (additional detail at the genset level for the market generators, including DUID and Station information, as per current setgendata)
SETGENDATA	
SETSMALLGENDATA	
SETCPDATAREGION	SET_ENERGY_REGION_SUMMARY (all participants energy transactions grouped by RegionID, public data)
SETGENDATAREGION	
BILLINGCPDATA	BILLING_ENERGY_TRANSACTIONS (Sum for the billing week grouped by ParticipantID/ConnectionPointID)
BILLINGGENDATA	BILLING_ENERGY_GENSET_DETAIL (Sum for the billing week grouped by ParticipantID/GenSetID)

* Reference: [MMS Data Model v5.1](#) and [v5.2 from May 2023 Technical specification](#)

** Subject to change pending development and testing outcomes.

New energy transactions table fields

Field name *	Data type	Description
SettlementDate	DATE	The Settlement Date
VersionNo	INTEGER	The Settlement Run Number
PeriodId	INTEGER	The Settlement 5Min Period Id (1 to 288)
ParticipantId	VARCHAR	The Participant ID Identifier
ConnectionPointId	VARCHAR	The Connection Point ID for the Participant, this may be a TNI or the generators Connection Point ID
RegionId	VARCHAR	The Region ID associated with the ConnectionPointId
CE_MWh	NUMBER	The Consumed Energy in MWh, sum of the DLF adjusted metered exports from the grid (always negative)
DME_MWh	NUMBER	Distribution Metered Energy in MWh, the portion of CE_MWh that is distribution connected for UFE allocation
UFEA_MWh	NUMBER	The Unaccounted For Energy Allocation in MWh (negative with normal UFE, positive with negative UFE)
ACE_MWh	NUMBER	The Adjusted Consumed Energy in MWh [CE_MWh + UFEA_MWh]
ASOE_MWh	NUMBER	The Adjusted Sent Out Energy in MWh, sum of the DLF adjusted metered imports to the grid (always positive)
Total_MWh	NUMBER	The Total Energy in MWh [ACE_MWh + ASOE_MWh]
RRP	NUMBER	The Regional Reference Price
TLF	NUMBER	Transmission Loss Factor Applied for the energy amount**
ACE_Amount	NUMBER	The ACE dollar value amount with TLF applied [ACE_MWh x RRP x TLF]
ASOE_Amount	NUMBER	The ASOE dollar value amount with TLF applied [ASOE_MWh x RRP x TLF]
Total_Amount	NUMBER	The total dollar value amount with TLF applied [ACE_Cost + ASOE_Cost]
Case_Id	NUMBER	The Meter Case ID associated with the Settlement Run Number
Meter_Type	VARCHAR	Indicator of the type of energy (Generator/Customer/NREG/BDU) for fee calculation purposes only
Aggregate_Read_Flag	INTEGER	Indicator of whether the read record was received as part of the Aggregate Reads
Individual_Read_Flag	INTEGER	Indicator of whether the read record was received as part of the Individual Reads
LastChanged	DATETIME	The Date time of the record update

* Subject to change pending development and testing outcomes.

** TLF applied will be derived from the net energy flow at the ConnectionPoint/TNI when dual TLFs exist i.e. the sum of ASOE and ACE where negative (ACE > ASOE) results in the primary (load) TLF being applied and where positive in the secondary (generation) TLF being applied.

New genset detail example

- The new SET_ENERGY_GENSET_DETAIL table will be at the genset level, as per the current setgendata table, where genset and NMI are one-to-one.
- As well as STATIONID/DUID/GENSETID identifiers currently stored in setgendata, the new table will also contain the NMI (in MeterID field) and the ConnectionPointID, to facilitate reconciliation.
- The below example attempts to show the relationship between the 2 new tables, noting this is from the draft design, so the final data model may end up looking slightly different.

New main settlement table aggregated to ConnetionPointID: SET_ENERGY_TRANSACTIONS

Settlement Date	Version No	Period Id	Participant Id	Connection PointId	Region Id	CE_MWh	DME_MWh	UFEA_MWh	ACE_MWh	ASOE_MWh	Total_MWh	RRP	TLF	ACE_Amount	ASOE_Amount	Total_Amount	Case_Id	Meter_Type	Aggregate_Read_Flag	Individual_Read_Flag	LastChanged
2/06/2024	5	1	XXXBATT	VCPID1	VIC1	-20	-20	0	-20	30	10	\$10	0.98	-\$196	\$294	\$98	9999	BDU	N	Y	3/06/2024

Energy settlement example

Current Calculations

Market Customer

Imports = 10MWh

Exports = 30MWh

TA = AGE x TLF x RRP

TA = (10 - 30) x 0.95 x \$50

TA = -\$950

Market Generator

Imports = 27MWh

Exports = 5MWh

TA = AGE x TLF x RRP

TA = (27 - 5) x 0.95 x \$50

TA = \$1045

Total Statement Amount

= -\$950 + \$1045

= \$95

New Rule

All Participants

TA = AGE x TLF x RRP

Where AGE = ACE + ASOE

ACE = - (30 + 5) = -35MWh

ASOE = 10 + 27 = 37MWh

TA = (-35 + 37) x 0.95 x 50

TA = \$95

Total Statement Amount

= \$95

IESS Calculations

All Participants

TA = (ACE x TLF x RRP) +
(ASOE x TLF x RRP)

ACE TA = -35 x 0.95 x \$50
= -\$1662.50

ASOE TA = 37 x 0.95 x \$50
= \$1757.50

Total Statement Amount

= -\$1662.50 + \$1757.50

= \$95

Changes to non-energy cost recovery

Non-Energy Cost	Current Recovery	IESS Recovery
FCAS Contingency Lower Services	Market Customer participants based on the net energy (imports – exports) from setcpdata	All participants based on ACE from Energy_Transactions
NMAS Network Support Control Ancillary Services (NSCAS) including test payments		
Energy or FCAS Contingency Lower Directions		
RERT (Reliability and Emergency Reserve Trader)		
Market Suspension		
APC (Administered Price Claim)		
FCAS Contingency Raise Services	Market Generator and Market Small Generator Aggregator participants based on the net energy (imports – exports) from setgenda and setsmallgenda	All participants based on ASOE from Energy_Transactions
FCAS Contingency Raise Directions		
NMAS System Restart Ancillary Services (SRAS) including test payments	All participants based on the net energy (imports – exports) from setcpdata , setgenda and setsmallgenda	All participants based on ACE and ASOE from Energy_Transactions
Non-Energy and Non-AS Directions		
FCAS Regulation Services Costs	“Causer Pays” method from those participants with Market Participant Factors (MPFs), with the residual from Market Customers net energy (imports – exports) from setcpdata	Same, but with the residual from all participants ACE

Note: Unaccounted for Energy (UFE) while technically not a NECR item, does also move from being only allocated to Market Customers (when their NMIs are consuming energy in an interval only) to being allocated to all participants based on the DME (distribution connected consumed energy). This means generator auxiliary load can result in UFE being allocated to generator participants, for their distribution connected generators only.

Changes to embedded network management calculations

- The embedded network calculations for the parent NMIs will move from the Settlements system to the Metering system, so that the parent calculation is completed before being aggregated with the other reads of the parent FRMP
- Embedded network children are unaffected by the changes for IESS, the Local Retailer (LR) on their read is no longer relevant for settlements
- A simplified example below shows the reads for a single parent and child NMI on an embedded network, plus a single non-embedded NMI:

NMI	FRMP	LR	TNI	Imports	Exports	
NMI0000001	PARENTFRMP	GLOPOOL	VXXX	1	4	Single embedded network Parent NMI
NMI0000002	CHILDFRMP	PARENTFRMP	VXXX	2	2	Single embedded network Child NMI
NMI0000003	PARENTFRMP	GLOPOOL	VXXX	0.5	3	non-embedded normal NMI

Current Settlements calculation, aggregating all classes at once with parent netting:

FRMP	LR	TNI	Imports	Exports	
PARENTFRMP	GLOPOOL	VKT2	-0.5	5	negative imports (1 - 2 + 0.5 = -0.5) moved to exports

FRMP	LR	TNI	Imports	Exports	Net	
PARENTFRMP	GLOPOOL	VXXX	0	5.5	-5.5	current volumes billed

With IESS first Metering will net the child from the parent:

FRMP	LR	TNI	Imports	Exports	
PARENTFRMP	GLOPOOL	VXXX	-1	2	negative imports (1 - 2 = -1) move to exports
PARENTFRMP	GLOPOOL	VXXX	0	3	final netted parent read

Then Metering will aggregate this netted parent with other reads:

FRMP	LR	TNI	Imports	Exports	Net	
PARENTFRMP	GLOPOOL	VXXX	0.5	6	-5.5	final volumes to bill by Settlements

- There will be a change to the RM16 report as this will contain the Parent read after the children NMIs have been subtracted. This change also applies to parents of child NMIs that are market generators.
- Participants will still be able to reconcile RM16 with settlements values in statements, but will no longer be able to easily reconcile RM16 against RM21/27, without first performing the embedded network parent calculations
- Most embedded network parents will not see any change in the total energy \$ amount billed however for the very limited embedded networks having children with a different TNI than the parent, the altered energy volumes applying each TLF, will result in a change.

Settlement Report (SR) changes

- Updates required to reflect ACE and ASOE changes, additional changes have been made to improve clarity
- Unrelated to IESS, an unused column “FCAS Comp.” has been removed from the FCAS payments by connection point section and the Direction information section has been redesigned, as per the next slide
- A copy of the template SR as shown below has recently been added to the [IESS Participant Toolbox website](#)
- Note that no change is currently expected to the pdf statements for IESS

Industry transition

Darren Gatty

IESS settlement transition

Planned transition approach

- From IESS settlement start (02 Jun 2024), the data model legacy settlements reports (for all published runs) will continue to populate setcpdata, setgendata and setsmallgendata from the data in the new IESS table structure
- These legacy reports will remain in place only until the following data model release, 6-12 months after the IESS data model go-live
- Other deprecated tables, such as setcpdataregion and billingcpdata, will **not** continue to be updated from IESS commencement
- All market battery reads would be populated to setgendata once current dual NMI configuration is replaced by the IESS single NMI/DUID structure
- Generator exports (field EXPENERGY in setgendata) will be populated with ACE value, so will not always reconcile with the DLF adjusted meter reads as currently occurs, due to the impact of UFEA

Transition mappings

- An updated mapping file [Data Model Settlements tables mapping explainer](#) of the key new settlement and billing tables has recently been published to the AEMO website
- Included is a mapping of how the new tables will be used to populate the setcpdata, setgendata and setsmallgendata tables during the transition period
- As per examples from the mapping table shown below, there will not always be a direct mapping of the old fields to the new fields
- Where the equivalent field will have the opposite sign in the new table, this will be reversed in the process of populating the legacy reports
- Some other minor calculations will be performed to populate existing fields

Existing Table	Existing Field Name	Existing Table.Field	New Data Model Table.Field Mapping	Transition Population of Existing Fields	AEMO Notes
SETCPDATA	INENERGY	SETCPDATA.INENERGY	none	SET_ENERGY_TRANSACTIONS.ASOE_MWH	IESSE has no UFE impact to imports, so current UFE adjusted net import field has no direct mapping
SETCPDATA	XNENERGY	SETCPDATA.XNENERGY	SET_ENERGY_TRANSACTIONS.ACE_MWH	calculated field: ACE_MWH * -1	Net Exports UFE adjusted, so same as ACE though UFE treatment changes, also opposite sign
SETGENDATA	CPRRP	SETGENDATA.CPRRP	none	calculated field: RRP * TLF	
SETGENDATA	EXPENERGY	SETGENDATA.EXPENERGY	SET_ENERGY_GENSET_DETAIL.CE_MWH	SET_ENERGY_GENSET_DETAIL.ACE_MWH	CE_MWh matches EXPENERGY, but as UFE impacts embedded generators, ACE_MWh is settled volume

Transition approach impacts

BENEFITS

- Allows participants more time to manage downstream settlement data impacts
- Allows participants to use data from the 'old' tables that would be closely aligned with the 'new' IESS settlement information (ACE/ASOE)

DRAWBACKS

- From IESS settlement start, would not allow participants using the 'old' tables to fully reconcile against the new IESS settlement statements in the same way
- Participants would need to carefully assess and understand the data impacts on any downstream processes that are dependent on the 'old tables'
- From IESS commencement, AEMO Settlements team would not be able to provide reconciliation support to participants using the 'old' tables

Transition logic example (1/3)

- Records from SET_ENERGY_TRANSACTIONS where AGGREGATE_READ_FLAG = "Y", the ParticipantID ends with "SGA" and the METERTYPE = "NREG" will be populated to the table **setsmallgenda**
- Export energy and cost fields are currently included in this table as positive values, so the negative IESS table ACE values will have the sign reversed in the legacy report

New main settlement table aggregated to ConnectionPointID: SET_ENERGY_TRANSACTIONS

Settlement Date	Version No	Period Id	Participant Id	Connection PointId	Region Id	CE_ MWh	DME_ MWh	UFEA_ MWh	ACE_ MWh	ASOE_ MWh	Total_ MWh	RRP	TLF	ACE_ Amount	ASOE_ Amount	Total_ Amount	Case_Id	Meter_Type	Aggregate_Read_Flag	Individual_Read_Flag	LastChanged

Transition Population of Existing table: SETSMALLGENDATA

Settlement Date	Version No	Period Id	Participant Id	Connection PointId	Region Id	IMPORT ENERGY	EXPORT ENERGY	RRP	TLF	IMPENERGY COST	EXPENERGY COST	LastChanged
2/06/2024	5	1	XXXXSGA	VTNI	VIC1	20	1	\$10	0.98	\$196	\$10	3/06/2024

Transition logic example (2/3)

- Records from SET_ENERGY_TRANSACTIONS where AGGREGATE_READ_FLAG = "Y", excluding the SGA records being populated to setsmallgendata, will be populated to the table **setcpdata**
- Fields not currently populated will continue to show 0 / NULL
- AFE is net energy without UFEA applied, so will be calculated by CE_MWh + ASOE_MWh

New main settlement table aggregated to ConnectionPointID: SET_ENERGY_TRANSACTIONS

Settlement Date	Version No	Period Id	Participant Id	Connection PointId	Region Id	CE_MWh	DME_MWh	UFEA_MWh	ACE_MWh	ASOE_MWh	Total_MWh	RRP	TLF	ACE_Amount	ASOE_Amount	Total_Amount	Case_Id	Meter_Type	Aggregate_Read_Flag	Individual_Read_Flag	LastChanged

Q&A

Ulrika Lindholm

Stakeholder questions

Pre-submitted questions	AEMO's initial response
<p>I'd like to understand the approach for settlements transition and provide input</p>	<p>This session provides an overview of how the transition to new settlement arrangements will work for market participants. The approach presented is based on feedback from participants over February to July this year. The project team welcomes feedback on what additional information participants need to facilitate their implementation and readiness activities.</p>
<p>What are the IESS Settlements related changes to Technical Specifications and Data Model?</p>	<p>AEMO engages with participants on technical specifications and data models through the Market Systems User Group (MSUG) Next meeting is Wed 11 Oct 10am-12pm AEDT. All interested parties are welcome to attend and ask questions. More information and how to join: https://aemo.com.au/en/consultations/industry-forums-and-working-groups/list-of-industry-forums-and-working-groups/market-systems-user-group-msug</p>
<p>Are there any changes to Prudentials?</p>	<p>Yes. Ancillary services payments and costs need to be accounted for in prudential settings. AEMO is also consulting on improving prudential determinations for new market participants with bi-directional flows. See Credit Limit Procedures consultation.</p>

Stakeholder questions

Pre-submitted questions	AEMO's initial response
<p>What are the contact details for any questions regarding the change?</p>	<p>IESS project team: iess@aemo.com.au</p> <p>Or find us on the web at: https://aemo.com.au/en/initiatives/major-programs/integrating-energy-storage-systems-project</p>
<p>Will SETGENDATA and SETCPDATA continue beyond 2nd June 2024 with data being populated into these tables for a period of time?</p>	<p>A full explanation of the IESS settlement industry transition is provided in this session. In summary:</p> <ul style="list-style-type: none"> • From IESS settlement start (02 Jun 2024), the data model legacy settlements reports (for all published runs) will continue to populate setcpdata, setgendata and setsmallgendata from the data in the new IESS table structure • These legacy reports will remain in place only until the following data model release, 6-12 months after the IESS data model go-live.

Next steps & Close

Next steps

ACTION	RESPONSIBLE
<p>Consider conducting a detailed impact assessment against all areas of your operations.</p> <ul style="list-style-type: none">• Please consider checking all areas affected by removal of SETGEN and SETCP settlement data tables and introduction of new tables.	Participants
<p>Consider if additional information is required to facilitate industry implementation and readiness activities. The AEMO project team welcomes ongoing queries and feedback via IESS@aemo.com.au or 1to1 conversations.</p>	Participants

APPENDIX A

Glossary

IESS Glossary

Term	Definition
5MPD	5-minute pre-dispatch
ADC	Aggregated Dispatch Conformance
ADG_ID	Aggregate Dispatch Group identifier for an Aggregate System
AGC	Automatic generation control
ASL	Ancillary service load
ASU	Ancillary service unit
B2B	Business-to-business
B2M	Business-to-market
BDU	Bidirectional unit
BESS	Battery energy storage system
CR	Change request
CRMP	Cost recovery market participant
DRSP	Demand response service provider
DUID	Dispatchable unit identifier
FRMP	Financially responsible market participant
IESS	Integrating Energy Storage Systems rule
IRP	Integrated resource provider

Term	Definition
IRS	Integrated resource system
MSATS	Market settlements and transfer solutions
MSGA	Market small generation aggregator
MT PASA	Medium-term PASA
NCC	NMI classification code
NECR	Non-energy cost recovery
NEM	National electricity market
NEMDE	National electricity market dispatch engine
NMI	National metering identifier
PAE	Profiling and allocation engine
PASA	Projected assessment of system adequacy
PD	Pre-dispatch
PDM	Participant Data Model
PMS	Portfolio management system
SCADA	Supervisory control & data acquisition
SoC	State of charge
UFE	Unaccounted for energy
WDRU	Wholesale demand response unit

APPENDIX B

AEMO Competition Law – Meeting Protocol

AEMO Competition Law - Meeting Protocol

AEMO is committed to complying with all applicable laws, including the Competition and Consumer Act 2010 (CCA). In any dealings with AEMO, all participants agree to adhere to the CCA at all times and to comply with appropriate protocols where required to do so.

AEMO has developed meeting protocols to support compliance with the CCA in working groups and other forums with energy stakeholders. Before attending, participants should confirm the application of the appropriate meeting protocol.
