

## Value Proposition

The Reform Delivery Committee (RDC) brings together a strategic group of representatives from across the energy sector, including participants and market bodies, to facilitate deep and effective collaboration across key planning activities of the NEM Reform Program (the Program). By doing so it supports the efficient, and cost-effective delivery of the portfolio of reform initiatives – ultimately for the benefit of the consumer.

The Program is a **large-scale, complex, industry-wide program**, impacting participants across all areas of the NEM. Each initiative that makes up the Program’s scope supports the transition of the NEM and brings Australia closer to a net-zero future.

The **RDC serves as an advisory body** for the Program providing input and strategic advice in relation to the planning and implementation aspects across the suite of reform initiatives within the Program.

### RDC key planning activities

### Role of Members

- Meeting up to **3 times per annum** (preceding Executive Forum)
- Assessment of initiative / Program wide **participant impacts**
- Oversight of the **NEM Reform Implementation Roadmap** and key changes / challenges
- **Strategic insight** into opportunities to drive Program efficiencies and de-risk delivery (go-live)
- **Dissemination of information** to other relevant stakeholders.

### COMMITTEE MEMBERSHIP PROVIDES

- Front row seat to reform implementation supporting the energy transition, how it impacts the broader industry and the challenges and opportunities it brings.
- Program-wide understanding of the scope and breadth of initiatives and their implementation impact to your organisation and industry at large.
- Engagement with experts from across AEMO, AEMC, industry associations and market participants permitting a wide variety of perspectives impacting implementation, including technology, policy, and delivery.
- Ability to directly contribute to strategic discussions impacting the effective & efficient industry-wide delivery of reform initiatives.
- Capacity to drive efficiencies and take cost out of industry through identification and validation of delivery, bundling and sequencing opportunities.
