Dear Hitesh

RE: Use of LEDs as a light source to the roundabout at Westbury Road - Vale Street, Prospect Vale

Meander Valley Council supports the drive to explore the use of LEDs to illuminate our roadways. The use of LEDs is a new initiative that has strong support from within Council as it recognises the benefits associated with LEDs. The advantages range from increased safety, improved social wellbeing, reduced environmental impacts and reductions in the cost of service.

Meander Valley Council is committed to installing LEDs as a new light source, initially throughout urban areas of its Municipality. The first stage will require Council to undertake a trial period in conjunction with TasNetworks. It will take place at Council's newly constructed roundabout at the intersection of Westbury Road and Vale Street, Prospect Vale.

In order to undertake this trial and introduce these luminaires into a public street lighting network, Council will need the device load for the following luminaires included on the AEMO load tables:

Spinella Roadway LED fixtures:

- Spinella Roadway LED 43W Fixture
- Spinella Roadway LED 91W Fixture
- Spinella Roadway LED 131W Fixture
- Spinella Roadway LED 230W Fixture.

Please confirm that you will commence the required process to ensure that the above luminaires are included in the National AEMO Load Table. Can you also advise me when the above luminaires have been published in the National AEMO Load Table.

Yours sincerely

Dino De Paoli
Director
