HOW TO USE THIS DOCUMENT

Although this document is lengthy, in most instances you will only need to read one section to work out what obligations you have.

All participants should read and be familiar with Sections 1 to 6, which contain overview material. In particular, it is essential that you read Section 2, which defines, for each role, what overall obligations it has with regard to these procedures.

The majority of the document (Sections 7 to 42) covers specific tasks you might either have to initiate or be notified about, and the rules and obligations you have with regard to them.

For example, if you are intending to change a *small customer's retailer*, assuming that you are already familiar with Sections 1 to 6, you would:

- Check the grouping of sections covering the topic 'Change Retailer' (Sections 7 to 9).
- Select and then read Section 7, which is called 'Change Retailer – Small or Large NMI'.

The names of sections 7 to 42 are structured like the following example:

CHANGE ROLE	–	CHANGE MDP	SMALL OR LARGE
Transaction		Specific task	NMI classification (where applicable)
Grouping			

Once you become familiar with this structure it is relatively easy to work out which section you need to select whenever you are initiating a transaction.

If you receive a notification from another participant and are not sure what obligations you have, confirm, from the notification, the Change Reason Code. Then check the 'Quick Reference Guide' at the beginning of this document to confirm what section covers this Change Reason Code.

3. CATS FUNCTIONALITY

3.1. Overview

- (a) The operation of CATS is based on 14 different types of transactions, as shown in section 3.3, and a separate RoLR function.
- (b) Six transaction types are initiated by Participants, whilst eight are initiated by MSATS.
- (c) The most significant transaction is the Change Request, which is used by a Participant when submitting new CATS Standing Data or changing existing CATS Standing Data.
- (d) The Change Request has a life cycle in which it is created (Initiated) and terminated (Completed) in accordance with section 3.5.
- (e) The Completion of a Change Request and the formation of a NMI Master Record occur simultaneously.
- (f) The status of each Role on the NMI Master Record is classified as 'Current'. If the CATS Standing Data being changed by a Change Request is a Role, the status of each Role to be changed by the Change Request is classified as 'New'.
- (g) A Change Request will be Completed on:
 - (i) the day after the Objection Logging Period has ended, provided no Objections have been received and an Actual Change Date exists; or
 - (ii) where an Objection has been received, the Change Request is Completed the day after all Objections have been withdrawn, the Objection Logging Period has ended, and an Actual Change Date exists,

The change is effective from the Actual Change Date.
- (h) A Change Request that has been Initiated for the purpose of creating a *NMI* will use the date nominated as the Proposed Change Date to populate the Actual Change Date field to allow the Change Request to be Completed.
- (i) A Change Request carries with it a set of CATS Standing Data items. The set of data items will vary with the transaction selected by the Participant initiating the Change Request. Each transaction has a code (Change Reason Code), as detailed in section 4.2 and Table 4-A.
- (j) The Change Reason Codes have been separated into groups of events for the purpose of these Procedures, as shown in Table 3-B. Obligations imposed on Participants in regard to Change Reason Codes are contained in sections 7 to 40.
- (k) The next most significant transaction is the NMI Discovery Search. This transaction will be used by a Participant when undertaking a search of the CATS Standing Data, as specified in section 41.
- (l) The RoLR functionality within MSATS is detailed in section 40.

3.2. Principles

The following principles apply in regard to the functionality of CATS:

- (a) Current and New Roles will be notified of a change in the status of the Change Request in accordance with the Change Request Notification Rules.
- (b) A Change Reason Code will contain rules that specify which Participant(s) must provide the data for the Change Request and when the data is required.
- (c) A Change Reason Code will contain rules specifying which data will be present in the NMI Master Record before the Change Request can be Completed.

- (d) Jurisdictions will specify rules to control the period in which retrospective information may be accepted by MSATS.
- (e) Jurisdictions will specify rules to control the period in which an Objection may be logged.
- (f) If an Objection to the change of *retailer* transaction is submitted by a Participant within the Objection Logging Period, the transfer will not proceed until the Objection is cleared. If the objection is not cleared, the transfer transaction will expire and be Cancelled and all relevant Participants will be notified.
- (g) Jurisdictions will specify rules to control the period in which an Objection may be cleared.
- (h) If there are no outstanding Objections to a current change of *retailer* transaction after the Objection Logging Period has passed, the Change Request will proceed to Completed and the information contained in the transaction will become the NMI Master Record.
- (i) Jurisdictions will specify rules to control who is allowed to Object to a Change Request, the reason for the Objection and the NMI Classification Code appropriate to that Objection.
- (j) After a *NMI* is created, and prior to the Actual Change Date, the *meter(s)* and default NMI Datastreams may be set up by whoever is nominated as the default party.
- (k) After a *NMI* is created, and prior to the Actual Change Date, if a Datastream is not set up the entry of the *NMI* into MSATS should not be delayed.

3.3. Transaction Types

- (a) The types of transactions performed by MSATS are specified in Table 3-A.
- (b) The codes and rules associated with the Change Request transaction are provided in section [04](#).
- (c) Acknowledgement and response transactions are dependent on whether online or batch function is invoked.

WOBJ	Objection Withdrawal	Participant	The initiating Participant may withdraw an Objection. Other Participants will be informed in accordance with the applicable Change Request Status Notification Rules.

3.4. Change Requests

- (a) A Change Request is the facility by which a Participant interacts with MSATS in order to effect a change in data to some or all aspects of information regarding an End User *connection point* prior to a transfer, during a transfer, or after a transfer has Completed.
- (b) Information about an End User's *connection point* includes the names and Roles of organisations (Participant IDs) that provide a *connection point* service to the End User, the technical details associated with the End User's *metering installation* and specific information that would assist *retailers* in providing competitive offers to End Users.
- (c) A Change Request is Initiated by selecting the Transaction Type Code CR, and the appropriate Change Reason Code. The Participant must select the Change Reason Code that most appropriately reflects the reasons for the change. The assignment of the Change Reason Codes to various types of events is provided in Table 3-B. A description of the Change Reason Codes is provided in Table 4-A, and in each section to which the Change Reason Code applies.
- (d) The completion of a Change Request by submitting all required data can be performed in either an on-line interactive mode or an off-line batch mode.
- (e) Only one *NMI* is allowed on one Change Request. However, there can be multiple *NMI* suffixes and multiple Meter Serial IDs assigned to the one Change Request.
- (f) When submitting a Change Request to MSATS, the Change Request is 'wrapped' in an aseXML message format. This format is capable of accommodating more than one Change Request (when submitted via batch processes).
- (g) When using the batch process, MSATS will respond to the submission of a Change Request once validation is complete, with an approval or a Rejection using Transaction Type Code CRR.

- (h) A Change Request can be withdrawn by the Participant who Initiated the Change Request up until the time the Change Request is Completed.
- (i) The Change Reason Code will govern which data items are available to the Participant when initiating the Change Request.
- (j) Within certain Change Reason Codes, data items associated with address information are provided as mandatory and optional. Mandatory address information specified as locality, state and postcode, where 'locality' has the same meaning as 'suburb'. Optional address information is given in either structured or unstructured format. Section 41.3.1 provides additional information about address data items.
- (k) A Change Request can only be assigned one DLF Code.

3.5. Change Request Status Life Cycle

- (a) The progression of a Change Request is based on the principle that transactions will be approved unless an Objection is received.
- (b) During its life cycle, a Change Request may have the status of:
 - (i) Initiated;
 - (ii) Pending Validation;
 - (iii) Rejected;
 - (iv) Requested;
 - (v) Objected;
 - (vi) Pending;
 - (vii) Completed;
 - (viii) Cancelled.

The figure below highlights how each status relates to each other:

- (c) Initiation is the first status of a new Change Request. During this status, the initiating Participant will select an appropriate Change Reason Code, populate the Change Request with the data permitted by the Change Reason Code, and then submit the Change Request to MSATS. The submission can be through the interactive screen or by a batch process.
- (d) MSATS will then validate the Change Request prior to transferring the Change Request to the Pending Validation status.
- (e) The Pending Validation status commences after the Change Request has passed initial validation for entry into MSATS. However, not all the data that is required to initiate the transaction may be present in MSATS. If mandatory data is missing from the Change Request, the Change Request will be Rejected. If the missing data is for the NMI Master Record, a Data Request will be sent to the nominated Participant, and MSATS will check for the receipt of that data. There is no time limit imposed by MSATS for the provision of this data, however, the Participant that receives the Data Request must respond in a reasonable time. The Change Request will be approved only after all required data has been submitted.
- (f) The Rejected status occurs where a Change Request has failed validation. This can occur:
- (i) During the validation of a Change Request whilst it is at the Pending Validation status; or
 - (ii) At the time of completion of the Change Request (in rare circumstances where a change to some other data made after this Change Request was submitted has now made this change invalid).

When a transaction has been Rejected, all Participants associated with the transaction will be notified in accordance with the Change Request Status Notification Rules.

- (g) The Requested status is where a transaction has been validated, i.e. there is no missing data. Notifications of the Requested transaction are sent to the relevant Participants. The Objection Logging Period and Objection Clearing Periods have been identified. Any Objections received are validated against the Objection Rules or no Objections have been submitted.
- (h) The Objected status occurs where one or more Objections have been received. Notifications of the Objections are sent to the relevant parties. This includes details of the Objections and whether the transaction was already being Objected to. When an Objection is withdrawn, the relevant parties will be notified of the details of the withdrawn Objection. When the last Objection is withdrawn, the transaction status changes back to Requested, unless the Objection Logging Period has expired, in which case it will move to Pending status. If the Objection Clearing Period has expired and an Objection that is subject to the Objection Logging Period has not been withdrawn the status will be changed to Cancelled.
- (i) The Pending status is where no Objections have been received, or all Objections have been withdrawn and the Objection period has passed. The transaction is waiting for the change date to be reached. If the Proposed Change Date is reached and all required data is present, the status will change to Completed. The status will remain Pending whilst any required data remains outstanding or an Objection that is not subject to the Objection Logging Period is not raised. Notifications are sent to the relevant Participants in accordance with the Change Request Status Notification Rules.
- (j) The Completed status occurs where the Objection Logging Period has passed, all required data is present in MSATS and the Proposed Change Date has been reached or is passed. Notifications are sent to the relevant Participants in accordance with the Change Request Status Notification Rules.
- (k) The Cancelled status occurs where:
 - (i) Not all Objections have been withdrawn at expiry of the Objection Clearing Period; or
 - (ii) The initiator of the Change Request has withdrawn the transaction.

When a Change Request is Cancelled, notifications are sent to the relevant Participants in accordance with the Change Request Status Notification Rules.

3.6. Transaction Validation

- (a) A Change Request that has been Initiated by a Participant will undergo several validations by MSATS prior to being accepted to the Requested status.
 - (i) The first validation will check that any code or date in the Change Request is in accordance with the codes and rules look-up tables. Validation will be performed on the data contained in the following data items:
 - (A) Change Request ID;
 - (B) Jurisdiction;
 - (C) Role ID;
 - (D) NMI Status Code;
 - (E) Read Type Code;
 - (F) Change Request code;
 - (G) TNI Code;
 - (H) DLF Code;

- (I) Metering Installation Type Code;
 - (J) Parent Name;
 - (K) Child Name; and
 - (L) Proposed Change Date.
- (ii) The second validation will check for valid Change Reason Codes and Field Validation Rules. Validation will be performed against the following codes and rules:
 - (A) Change Reason Codes, as per Table 4-A;
 - (B) Field Validation Rules: RI, OI, RQ, RD, RA.
 - (iii) A third validation will check the *NMI* characters against the NMI Checksum.
 - (iv) A fourth validation will check that the Participant who Initiated the Change Request is an active Participant and able to act in the Role that can initiate the transaction. Validation will be performed on the data contained in the following data items:
 - (A) Participant ID;
 - (B) Participant Status;
 - (C) Participant Roles.
 - (v) A fifth validation will check that the Proposed Change Date and the Actual Change Date are within the range allowed by the Change Reason Code.
 - (vi) A sixth validation will check the Proposed Change Date, the Actual Change Date and the Actual End Date against the Timeframe Rules.
- (b) An Objection will be validated against general conditions and rule based conditions, as follows:
 - (i) General conditions against which a validation of an Objection is performed are as follows:
 - (A) The Participant submitting the Objection is an active Participant;
 - (B) The Objection is not a duplicate of an existing Objection by that Participant;
 - (C) The Role of the Participant is in accordance with the Objection Rules;
 - (D) The Objection is linked to an active Change Request ID;
 - (E) The status of the Change Request is either Requested or Objected.
 - (ii) Rule-based conditions against which a validation of an Objection is performed are as follows:
 - (A) The Participant can make the Objection in accordance with its status.
 - (B) The Objection Code is permitted for the Role .
 - (iii) The Change Request is within its Objection Logging Period.
 - (iv) The Change Request is valid (PEND, REQ, OBJ) for Objections that are not subject to the Objection Logging Period.
- (c) A Change Request will be validated for information regarding *embedded networks* as follows:
 - (i) The Embedded Network Codes will be checked against a list of codes contained in MSATS.

- (ii) Parent Names and Child Names will be checked to ensure that they are not identical for the same *NMI*;
 - (iii) The Child *NMI* being submitted will be checked against the Parent *NMI*;
 - (iv) A check will be performed for circular relationships;
 - (v) Prevent changes of the ENLR from being effected on a Child *NMI*;
 - (vi) Check that if a Parent *NMI* is not active that there are no active Child *NMIs*.
- (d) After the Change Request has been submitted, any subsequent Change Request submitted by the initial Participant to change the data on the Change Request will be validated, as follows:
- (i) The *NMI* on the subsequent Change Request will be checked against the *NMI* on the initial Change Request.
 - (ii) The Participant ID on the subsequent Change Request will be checked against the Participant ID on the initial Change Request.

3.7. Valid Proposed Change Date for Prospective and Retrospective Change Requests

3.7.1. Retrospective Changes

- (a) For a Retrospective Change, the Proposed Change Date must either be the date the Change Request is raised or a date in the past and within the number of days allowed by the Timeframe Rules/Change Reason Code/*NMI* Classification Code on this Change Request. The maximum number of days is the value stored in Retrospective Days. At present, the maximum number of days in the past for any Role Change Request is 130 *business days*, the maximum number of days in the past for changing *NMI Standing Data* is 140 *business days*.
- (b) Retrospective Changes have 0 days for the Prospective Days in the Timeframe Rules for the Jurisdiction/Change Reason Code/*NMI* Classification Code combination.
- (c) Table 3-C lists Retrospective Change Reason Codes.

3.7.2. Prospective Changes

- (a) For a Prospective Change, the Proposed Change Date must be the day following the date on which a Change Request is submitted, or a date after that date.
- (b) The maximum number of days for a Prospective Change depends on the Timeframe Rules/Change Reason Code/NMI Classification Code for the relevant Change Request. The maximum number of days is the value stored in Prospective Days. At present, the maximum allowable number of days for any Prospective Change is 65 *business days*.
- (c) Prospective Changes have 0 days for the Retrospective Days in the Timeframe Rules/Change Reason Code/NMI Classification Code combination.

4. CATS CODES AND RULES FOR A CHANGE REQUEST

4.1. Introduction

- (a) This section specifies the codes and rules that apply when a Participant submits a Change Request to, or seeks access to CATS Standing Data [for both the CATS and WIGS Procedures](#).
- (b) MSATS contains the following codes and rules that apply to Change Requests:

Change Reason Codes	Role Codes	Initiation Rules
Jurisdiction Codes	Timeframe Rules	Objection Codes
Objection Rules	NMI Classification Codes	NMI Status Codes
Metering Installation Type Codes	Read Type Codes	Field Validation Rules
Change Request Status Notification Rules	Customer Classification Code	Customer Threshold Code

4.2. Change Reason Code

- (a) The Change Reason Codes govern the population of data in a Change Request.
- (b) For each Change Reason Code, the following parameters are defined:
- (i) The Participants permitted to initiate a Change Request.
 - (ii) The data items that can be populated in the Change Request.
 - (iii) The data that must already be present in MSATS before the Change Request can be Completed.
 - (iv) Whether another Participant must supply the exact date of the change (i.e. is the MDP required to supply the date of the Actual Meter Reading to Complete the Change Request).
 - (v) The date range window.
 - (vi) The Objection Logging Period.
 - (vii) The Objection Clearing Period.
 - (viii) The Roles that will be notified of a Change Request, and at what stages in the Change Request that they will be notified.
 - (ix) The Participants who can Object to Change Request and the basis for Objection.
- (c) For any Change Reason Code, some elements are defined globally (i.e. they apply in all Jurisdictions) while others are defined separately for each Jurisdiction.
- (d) The Change Reason Codes and a brief description of each are provided in Table 4-A.

Note (3): A single Change Request using these Change Reason Codes may be populated with multiple Meter Serial IDs.

Note (4): “not SMALL” means LARGE, WHOLESAL, INTERCON, GENERATR or SAMPLE NMIs.

4.3. Role Codes

- (a) A Role Code identifies the type of association that a Participant has with a *NMI*.
- (b) The *NMI* Master Record will contain each ‘Current’ Role for each *NMI*. Each proposed Role for a *NMI* is referred to as a ‘New’ Role.
- (c) The Role Codes defined in Table 4-B are used to define:
 - (i) Participants that can initiate a Change Request;
 - (ii) Participants to supply data when it is needed to Complete a Change Request;
 - (iii) Change Request Status Notification Rules;
 - (iv) Objection Rules; and
 - (v) Access rights to CATS Standing Data.

Table 4-B – Role Codes

Code	Description
FRMP	Financially Responsible Market Participant
LNSP	Local Network Service Provider or <i>Embedded Network Manager</i> for <i>child connection points</i>
LR	Local Retailer or Embedded Network Local Retailer (ENLR)
MDP	Metering Data Provider – Category D
MPB	Metering Provider – Category B
MPC	Metering Data Provider – Category C
NEMM	National Electricity Market Operator
NSP2	Second Network Service Provider (For Wholesale NMIs only)
ROLR	Retailer of Last Resort
RP	Metering Coordinator

4.4. Use of LR/ENLR within this Procedure

The local retailer field in Change Request tables specifies ENLR where the Change Request affects the ENLR, for example where the ENLR can object or should receive a Notification.

Where an ENLR is has no role in the Change Request, the relevant field specifies LR.

4.4.4.5. Change Request Initiation Rules

- (a) The Initiation Rules specify the Roles permitted to Initiate Change Requests.
- (b) A Change Request may be Initiated by both ‘New’ or ‘Current’ Roles.
- (c) Only a ‘New’ Role can be entered on a Change Request.

- (d) The Initiation Rules for each Change Reason Code are listed in the section to which the Change Reason Codes are detailed.

4.5.4.6. Jurisdiction Codes

- (a) The Jurisdiction Codes defined in Table 4-C identifies the Jurisdiction in which a *NMI* is situated.
- (b) The Jurisdiction Code is used to apply Jurisdiction-based business rules.

Table 4-C – Jurisdiction Codes

Code	Description
ACT	Australian Capital Territory
ALL	All Jurisdictions
NEM	National Electricity Market
NSW	New South Wales
QLD	Queensland
SA	South Australia
TAS	Tasmania
VIC	Victoria

4.6.4.7. Timeframe Rules

- (a) The Timeframe Rules specify whether a Jurisdiction, Change Reason Code and NMI Classification Code are a valid combination.
- (b) For any Change Reason Code, the Timeframe Rules specify:
- (i) Whether the Change Reason Code can be used to make a Prospective Change or Retrospective Change;
 - (ii) The number of days into the future (Prospective Days) or the past (Retrospective Days) that are allowable for the Proposed Change Date;
 - (iii) The number of days allowed for Objections (Objection Logging Period), which commences from the next *business day* after the date that the Change Request is Initiated.; and
 - (iv) The number of days after which a Change Request that has been Objected to will be Cancelled (Objection Clearing Period), which commences from the next *business day* after the date that the Change Request is Initiated.
- (c) The Timeframe Rules may be specified by Jurisdiction.
- (d) Unless stated otherwise, the Timeframe Rules for a Change Reason Code apply to all Jurisdictions.

4.7.4.8. Objection Codes

- (a) The Objection Codes defined in Table 4-D are the only basis on which Participants can Object to a Change Request.
- (b) The Objection Codes are applied to each Jurisdiction and each Change Reason Code in accordance with the Objection Rules.

Table 4-D – Objection Codes

Code	Description
BADDATA	Used by a Participant to confirm that the standing data in the change request or the NMI Master Record is incorrect (e.g. Meter Serial ID). If the Participant role is incorrect; use NOTRESP.
BADMETER	Used by the MDP for change retailer requests, where the Read Type Code is not compatible with the method for collecting <i>metering data</i> at the <i>metering installation</i> .
BADPARTY	Used by the MC when the MDP, MPB, or MPC nominated on a change of retailer request or change of role is incorrect as they are not the party appointed by the MC, or do not have the capability or capacity to operate in the Role proposed.
BLOCK	AEMO Objection to the transaction either at the request of a Jurisdiction or for operational reasons.
CONTRACT	Must only be used where a change in MC is proposed, the Current MC has been appointed by a large End User and has an existing contractual obligation with the large End User that takes precedence over the proposed change.
CRCODE	Can be used if the Change Reason Code being used does not apply to the <i>NMI</i> concerned.
DATEBAD	Used by the MDP for <i>meter installation</i> types 4A, 5 and 6 to inform the initiating party the proposed date in the change of retailer or change of role request does not align with the date the Metering Reading is scheduled to be taken. Used by the Current FRMP, or MDP for retrospective change of <i>retailer</i> or change of role requests where one or both of the Proposed Change Date, or Actual End Date is incorrect.
DEBT	Used by the Current FRMP for change <i>retailer</i> requests in Victoria only, where there is an aged debt reaching Jurisdictional limits.
DECLINED	Used by a Participant who does not wish to perform the Role for which it is nominated in the Change Request.
NOACC (1)	Used where no access can be obtained to the <i>metering installation</i> to perform the manual collection of <i>metering data</i> required to facilitate a transfer of FRMP, or Meter Churn.
NOTAPRD	Used by the LNSP where a Participant is not accredited or authorised to operate within the LNSP area, most typically applying to the Role of MP.
NOTAWARE	Used by the Current FRMP when no communication has been received from the New FRMP confirming that an error correction transaction will be processed.
NOTPRUD	No prudential approval. AEMO has not approved the transaction for prudential reasons.
NOTRANS	Used by the Current FRMP and only applies to retrospective change of <i>retailer</i> requests. A check of records shows no previous change of <i>retailer</i> request exists for the error correction change of <i>retailer</i> .
NOTRESP	Not responsible for <i>NMI</i> in the identified Role. For use by a nominated Participant to Object on the basis that they are not responsible in the Role in which they are nominated.
RETRO	Participant does not agree to a Retrospective Change.

Note (1): Objections for "NOACC" are not subject to Objection Logging Periods or Objection Clearing Periods. A valid Actual Change Date being entered against a Change Request with an Objection of "NOACC" will withdraw any "NOACC" Objections.

4.8.4.9. Objection Rules

- (a) The Objection Rules specify the way in which Objection Codes can be used for each Change Reason Code and Role.

- (b) The Objection Rules for each Change Reason Code are listed in the section to which the Change Reason Code applies.
- (c) Unless stated otherwise, Objection Rules apply in every Jurisdiction.

4.9.4.10. NMI Classification Codes

- (a) The NMI Classification Code enables MSATS to be informed of the nature of the flow of electricity at the *connection point* to which the *NMI* information applies.
- (b) The NMI Classification Codes 'LARGE' and 'SMALL' ~~are~~ must be used when the other NMI Classification codes listed in Table 4-E do not apply these Procedures. They are parameters for defining Change Reason Codes, application timeframes and Objection Rules.
- (c) The NMI Classification Codes 'LARGE' and 'SMALL' are based on the total annual load of the *NMI* as per Table 4-E.

4.10.4.11. End User Classification

4.10.4.11.1. Customer Classification Code

- The FRMP must update an End User's Customer Classification Code as specified in Table 4-F.
- The Customer Classification Code relates to an End User, or previous End User, at a single *connection point* to which the *NMI* applies.

Table 4-F – Customer Classification Codes

Code
BUSINESS
RESIDENTIAL

4.10.4.11.2. Customer Threshold Code

- The Customer Threshold Code is used to indicate the level of an End User's electricity consumption at a single *connection point* to which a *NMI* applies and is based on the LNSP's determination of the annualised consumption for an End User at a single *connection point*.
- The Customer Threshold Code is mandatory for all *NMIs* with a *NMI Status Code* of 'A' or 'D', and a *Customer Classification Code* of 'BUSINESS'.
- The Customer Threshold Codes are specified in Table 4-G.

Table 4-G – Customer Threshold Codes

Customer Threshold Code	Description
LOW	Consumption is less than the 'lower consumption threshold' as defined in the National Energy Retail Regulations
MEDIUM	Consumption is equal to or greater than the 'lower consumption threshold', but less than the 'upper consumption threshold', as defined in the National Energy Retail Regulations
HIGH	Consumption is equal to or greater than the 'upper consumption threshold' as defined in the National Energy Retail Regulations

4.11.4.12. Status Codes

4.11.1.4.12.1. NMI Status Codes

- The NMI Status Codes defined in table 4-H are used to determine if a *NMI* can be used for a retail transfer.
- The NMI Status Code 'X' is the only status that does not allow *NMI* transfers between *retailers*.

Table 4-H – NMI Status Codes

Code	Name of code	Description of code
A	Active NMI	Applies when a <i>NMI</i> is energised.
D	Not energised NMI	Applies when the <i>NMI</i> exists in MSATS and the <i>connection point</i> is de-energised.
X	Extinct NMI	Applies when: <ul style="list-style-type: none"> the <i>network connection</i> has been permanently removed from the <i>connection point</i>, or the <i>embedded network connection</i> has been permanently removed from the <i>child connection point</i>, or the <i>connection point</i> has been moved from an LNSP's <i>network</i> to an <i>embedded network</i> or vice versa. Under this condition the existing <i>NMI</i> will not be reallocated to any other <i>connection point</i> in the future. A <i>NMI</i> with this status can never be transferred.
G	Greenfield Site NMI	Applies to a Site that has never been energised. The <i>connection point</i> may require further Site works to be undertaken and will also require energisation. Once the NMI Status Code is changed from 'G', it cannot revert to 'G'.
N	Off Market Child NMI	Applies when a <i>child connection point</i> is no longer settled in the <i>NEM</i> .

4.11.2.4.12.2. Datastream Status Codes

- In the MDM process, the Datastream Status Code is used [in combination with the DataStreamType](#) to determine whether a Datastream [suffix](#) is to be used in the *settlements* process or where any other *metering data* has been configured to support the calculation of Unaccounted for Energy (UFE).
- The Datastream Status Codes in MSATS are 'A' and 'I', as defined in Table 4-I.

Table 4-I – Datastream Status Codes

Code	Name of code	Description of code
A	Active NMI Datastream	Applies when an NMI Datastream <u>Suffix</u> is to be used in <u>combination with the DataStreamType to determine whether a DataStreamm Suffix is to be used in the settlements process or where any other metering data has been configured to support the calculation of Unaccounted for Energy (UFE), including the calculation of UFE.</u>
I	Inactive NMI Datastream	Applies when the NMI Datastream <u>Suffix</u> is not to be used in <u>settlements or the calculation fo UFE.</u>

4.11.3.4.12.3. Meter Register Status Codes

- The Meter Register Status Codes denote the status of the *meter* in MSATS.
- The only Meter Register Status Codes are 'C', 'R', and 'D' as defined in [Table 4-J](#)~~Table 4-J~~.

Table 4-J – Meter Register Status Codes

Code	Name of code	Description of code
C	Current	Applies when a <i>meter</i> at the <i>NMI</i> is current and not <i>disconnected</i> .
R	Removed	Applies when a <i>meter</i> at the <i>NMI</i> is removed.
D	Remotely Disconnected	Applies when a <i>meter</i> at the <i>NMI</i> is <i>disconnected</i> .

4.11.4.4.12.4. Register Identifier Status Codes

- The Register Identifier Status Code indicates if a Meter Register is active.
- The Register Identifier Status Codes are C and R and are defined in [Table 4-K](#)~~Table 4-K~~.

Table 4-K – Register Identifier Status Codes

Code	Name	Description
C	Current	Applies when a Meter Register at the <i>NMI</i> is current, i.e. connected to a <i>connection point</i> .
R	Removed	Applies when a Meter Register at the <i>NMI</i> is removed, i.e. not connected to a <i>connection point</i> .

4.12.4.13. Metering Installation Type Codes

- The Metering Installation Type Codes defined in Table 4-L identifies the type of *metering installation* as specified in the *NER*.
- The Metering Installation Type Code also indicates whether the Actual Change Date must be input by a Participant other than the initiator of the Change Request. If the Manually Read Flag (see Table 4-L) is set to Y and the Change Request Field Validation Rules have been set up to request a date, a request will be sent to the nominated Participant to provide it.

Table 4-L – Metering Installation Type Codes

Code	Description	Manually Read Flag
BASIC	Accumulation Meter – Type 6	Y
COMMS1	Interval Meter with communications – Type 1	Y
COMMS2	Interval Meter with communications – Type 2	Y
COMMS3	Interval Meter with communications – Type 3	Y

Code	Description	Manually Read Flag
COMMS4	Interval Meter with communications – Type 4 (Note: This code is used for <i>large customer</i> with type 4 metering installations and for <i>small customer</i> type 4 metering installation installed before 1 December 2017)	Y
COMMS4C	CT connected <i>metering installation</i> that meets the <i>minimum services specifications</i>	Y
COMMS4D	Whole current <i>metering installation</i> that meets the <i>minimum services specifications</i>	Y
MRAM	<i>small customer metering installation</i> – Type 4A	Y
MRIM	Manually Read Interval Meter – Type 5	Y
NCONUML	<i>Non-contestable unmetered load</i>	<u>N/A</u>
PROF	For Profile Setup	N
SAMPLE	Sample Meter	Y
UMCP	Unmetered Supply – Type 7	N
VICAMI	a relevant <i>metering installation</i> as defined in clause 9.9C of the NER.	Y

4.12.1-4.13.1. Consequences of Allocating Certain Metering Installation Codes

- (a) If the Metering Installation Type Code is COMMSx, MRIM, MRAM, VICAMI, NCONUML or UMCP:
- (i) DataStreamType¹ must be:
 - (A) 'I' where the Interval Datastream is included in NEM Settlement process
 - (B) 'N' where the Interval Datastream is not to be included in the NEM Settlement process or NEM Profile calculations
 - (C) 'P' where Profile Datastream is included in NEM Profile calculation (P – Sample meters only)
 - ~~(i) I or P (P – Sample meters only)~~
 - (ii) ProfileName must be NOPROF
 - (iii) Datastream Suffix must be at a register level, Nx (e.g. N4E1, B1, Q1, K1)
- (b) If the Metering Installation Type Code is BASIC:
- (i) DataStreamType must be C
 - (ii) In Victoria, Tasmania and ACT, ProfileName must be NSLP
 - (iii) In NSW, QLD and SA, ProfileName must be NSLP or the relevant CLP
 - (iv) Datastream Suffix must be at a register level, numeric (e.g. 11)

4.13.4.14. Read Type Code

- (a) The Read Type Code is not used by MSATS for the purpose of *settlements*. There are no rules in MSATS controlling the use of the Read Type Code.
- (b) The Read Type Code is an instruction from the requesting FRMP to the MDP, nominated in the Change Request to assist the transfer by using the specified reading method.

¹ See Standing Data for MSATS for explanation of DataStreamType.

- (c) Where advice is provided to an MDP, the MDP would arrange for the Meter Reading to be undertaken.
- (d) The Read Type Code is used to signal when a *meter* should be read, whether an alternative arrangement is to be used, or whether no read is required.
- (e) In each case the Read Type Code is an instruction relating to the date in the Proposed Change Date.
- (f) A *meter* may be read on the NSRD (NS) or on a Special Read Date (SP).
- (g) An Estimated Reading (ER) may be provided in place of the Actual Meter Reading.
- (h) The Read Type Codes are specified in [Table 4-M](#).

Table 4-M – Read Type Codes

Code	Name of code	Description of code
CR	Consumer Read	Available if approved by Jurisdictional policy. Advice from New FRMP to MC or MDP that the End User has agreed to transfer on a Meter Reading it provides. MDP/MPC is not required to undertake a Special Meter Reading. <i>Applies to type 6 metering installations.</i>
EI	Existing Remotely-Read Interval Meter	Advice from the New FRMP to the MDP that there is an existing remotely-read Interval Meter at the <i>connection point</i> and that the existing <i>meters</i> will continue to be used after the transfer. <i>Applies to type 1 to 4 metering installations only.</i>
ER	Estimated Read	Available if approved by Jurisdictional policy. Advice from the New FRMP to MDP that the End User has agreed to transfer on an Estimated Reading. No Meter Reading is required for this transfer. MDP is to provide an Estimated Reading in accordance with the <i>metrology procedure</i> and any other Jurisdiction requirements. <i>Applies to type 4A, 5 and type 6 metering installations.</i>
GR	Greenfield NMI	Used when the <i>NMI</i> being transferred is a greenfield <i>connection point</i> and has never had a <i>metering installation</i> physically installed at the <i>connection point</i> and the <i>NMI Status</i> is 'G'
NS	Next Scheduled Read Date ⁽¹⁾	Advice from New FRMP to MDP that the Proposed Change Date for the End User transfer is the NSRD, which is, therefore, a date in the future. No other Meter Reading is required. An acceptable date is a window that is up to 3 <i>business days</i> before or 2 <i>business days</i> after the published NSRD. If the date proposed by the New FRMP is not within this same window (i.e. up to 3 <i>business days</i> before or 2 <i>business days</i> after), the MDP must advise the FRMP that there is a problem with the date proposed within 2 days of receipt of the Data Request. If the <i>meter</i> is read outside this window, the MDP is not obliged to provide an Actual Change Date CR 1500. <i>Applies to types 4A, 5 and type 6 metering installations.</i>
PR	Previous Read Date ⁽²⁾	Available if approved by Jurisdictional policy. Advice from the New FRMP to the MDP that the transfer is to occur on the previous Meter Reading. <i>Applies to type 4A, 5 and type 6 metering installations.</i>

Code	Name of code	Description of code
RR	Next Read Date	Advice from New FRMP to MDP that the Proposed Change Date for the End User transfer is to be the date the <i>meter</i> is next read, which is, therefore, a date in the future. This code should be used if it is intended that the transfer is to occur on the date that the <i>meter</i> is read next, whenever that date is (i.e. the Proposed Change Date has no relevance). Applies to types 4A, 5 and type 6 <i>metering installations</i> .
SP	Special Read	Advice from New FRMP to MDP that the Proposed Change Date for the End User transfer is a date that does not align with the scheduled reading cycle. The MDP/MPC is to arrange for the Special Meter Reading. Applies to type 4A, 5 and type 6 <i>metering installations</i> .
UM	Unmetered Connection Point	Used when the <i>NMI</i> being transferred is an unmetered <i>connection point</i> .

Note (1): There is no requirement to maintain the NSRD for *meters* that are remotely read. The NSRD will only be required for the type 4A, 5 and 6 *metering installations* where manual Meter Reading is necessary.

Note (2): The previous Meter Reading date is not held by MSATS. The New FRMP would obtain this information from the End User. This Read Type Code is likely to be used with Change Reason Codes 1010 and 1081.

- (i) The combinations of Read Type Codes, Metering Installation Type Codes and Change Reason Codes that can be valid, (provided the Read Type Code is allowed in a Jurisdiction), are specified in [Table 4-N](#). (The Metering Installation Type Code referred to here is the code for the existing metering record)

Note: 102X refers to 1020, 1021, 1022, 1023, 1024, 1025, 1026, 1027, 1028 and 1029.

Note: COMMSx refers to COMMS1, COMMS2, COMMS3, COMMS4, COMMS4C, COMMS4D.

Note: No meter reading is required for CR Code 1023

4.14.4.15. Field Validation Rules

- (a) The Field Validation Rules are based on data source codes as per table 4-O.
- (b) For any Change Reason Code, the Field Validation Rules specify:
 - (i) Which fields must be completed at the time the transaction is Initiated;
 - (ii) Which fields can optionally be completed at the time the transaction is Initiated;
 - (iii) Which fields must be present on the NMI Master Record for the transaction to proceed from Pending Validation to Requested and, if they are not present, which Participant must supply them; and
 - (iv) Whether the Actual Change Date has to be obtained from another Participant for *NMIs* where the *metering installations* are manually read (and if it does, who should be asked to supply it).
- (c) The obligations on Participants arising from the allocation of the Field Validation Rules are detailed in the section to which the Change Reason Code applies.
- (d) Each data source code is hard coded in MSATS and is not available for maintenance. The available data codes are identified in Table 4-O.

Table 4-O – Field Validation Data Source Codes

Code	Explanation
OI	Optional on Initiation. This means it is optionally supplied by the initiator of the Change Request.
RA	Requested by CATS regardless of whether it is already in CATS. For all RA fields, the Participant that supplies the data must be identified. For all RA fields, it is also necessary to identify whether this data is required prior to the transaction passing from Pending Validation to Requested. This code will be used for requesting the Actual Change Date on End User transfer Change Requests. (However, in this special case, the request will only be sent if the <i>metering installation</i> is flagged as manually read).
RD	This is only required for the Actual Change Date on the transaction that is returned as a consequence of a request to provide an Actual Change Date (currently 1500 is the only one).
RI	Required to Initiate. This means it must be supplied by the initiator of the Change Request.
RQ	Requested by CATS if the data is not already in CATS. For all RQ fields, the Participant that supplies the data must be identified. For all RQ fields, it is also necessary to identify whether this data is required prior to the transaction passing from Pending Validation to Requested.

4.15.4.16. Change Request Status Notification Rules

The Change Request Status Notification Rules define which Roles are to be advised when a Change Request undergoes a change in status. *In Change Requests where a LR is to be notified this will be the ENLR for a child NMI.*

Maintenance of Codes and Rules

- (a) AEMO must maintain the following codes and rules in MSATS:

Change Reason Codes	Role Codes	Initiation Rules
Jurisdiction Codes	Timeframe Rules	Objection Codes
Objection Rules	NMI Classification Codes	NMI Status Codes
Metering Installation Type Codes	Read Type Codes	Field Validation Rules

Change Request Status Notification Rules	NMI Discovery Search – NMI Search Rules	NMI Discovery Search – NMI Data Access Rules
NMI & CATS Standing Data Access Rules	Network Tariff Code	

- (b) MSATS will send a message to all Participants if a change is made to any code or rule.

4.16.4.17. Datastream Status Code

- (a) The Datastream Status Code is part of CATS Standing Data and is used for the management of the *metering data* within MSATS.
- (b) The Datastream Status Code makes use of the codes specified in Table 4-l.
- (c) When required by a Change Reason Code, Participants must nominate on a Change Request the status of the Datastream Status Code for the selected *NMI*.
- (d) If a Datastream Status Code is set to A (active) this flag will be used by MSATS to indicate that *metering data* is to be expected for the *NMI* for the purpose of:
- (i) aggregation in the *settlements* process; or
 - (ii) netting off in the determination of a *profile* shape; or
 - (iii) calculation of UFE.

4.17.4.18. Embedded Network Codes and Rules

- (a) MSATS requires each *embedded network* to be given a name, which is to be a code of up to 10 characters.
- (b) The LNSP must generate and provide the Embedded Network Code to AEMO.
- (i) The first character of the Embedded Network Code is to be the first character of the Jurisdiction in which the *embedded network* is located.
 - (ii) The second character of the Embedded Network Code is to be a character chosen to represent the LNSP in whose *distribution network* the *embedded network* is connected.
 - (iii) The LNSP must liaise with the owner of the *embedded network* to determine the other characters of the Embedded Network Code as per the Embedded Network Code structure specified by AEMO.²
 - (iv) The LNSP must provide the Embedded Network Code to AEMO within 5 *business days* of receiving the request from the *embedded network* owner or the ENM acting on behalf of the *embedded network* owner.
- (c) The LNSP must provide to AEMO the following when providing the Embedded Network Code:
- (i) Description of the *embedded network* (up to 50 characters long).
 - (ii) Locality, postcode and state of the *embedded network*.
 - (iii) Start date of the *embedded network*.
 - (iv) DLF Code of the Parent *NMI*.³
 - (v) TNI Code of the Parent *NMI*.⁴

² Document No MT_GN1710v0xx.doc – Allocation of Embedded Network Codes.

³ Note that subsequent update to the DLF Code is not required via this transaction.

⁴ Note that subsequent update to the TNI Code is not required via this transaction.

- (d) The LNSP at the *parent connection point* must allocate the Embedded Network Code to the Parent NMI within *2 business days*:
- (i) of being notified by AEMO that the Embedded Network Code has been created in MSATS, or
 - (ii) of the mandatory information required by the Create NMI Change Request becoming available if the Parent NMI has not been created, whichever is later.
- (e) The ENM must allocate the Embedded Network Code to the Child NMI which is the same as the Embedded Network Code of the Parent NMI.
- (f) Within *5 business days* of being appointed as the ENM for an *embedded network*, the ENM must provide AEMO with the following:
- (i) Date of the nomination,
 - (ii) EN's Participant ID,
 - (iii) Name of the EENSP⁵,
 - (iv) Embedded Network Code,
 - (v) Parent NMI, and
 - (vi) Address of the Parent NMI.

6. GUIDELINES FOR MANAGING CONCURRENT RETAIL TRANSFERS

6.1. Definition of concurrent retail transfers

- (a) Concurrent retail transfers are those where there is more than one change of *retailer* for a particular *NMI* at the same time in MSATS.
- (b) There are two types of concurrent retail transfers in MSATS.
 - (i) Type 1 is a concurrent retail transfer where the same FRMP has submitted more than one change of *retailer* Change Request for the one *NMI*.
 - (ii) Type 2 is a concurrent retail transfer request where more than one FRMP has submitted a change of *retailer* Change Request for one *NMI*.

6.2. Guidelines

Type 1 Concurrent Retail Transfers

- (a) MSATS will identify the type 1 concurrent retail transfers and the FRMP that has Initiated these Change Requests.
- (b) MSATS will Reject the newly submitted Change Request and a notification will be sent to the initiating FRMP detailing the reason for the Rejection.
- (c) The existing Change Request will remain unaffected and active in MSATS.

Type 2 Concurrent Retail Transfers

- (d) MSATS will identify the type 2 concurrent retail transfers and the FRMPs that have Initiated these Change Requests.
- (e) MSATS will Reject the newly submitted Change Request and a notification will be sent to the initiating Participant detailing the reason for the Rejection.
- (f) The existing Change Request to change a *retailer* is Cancelled and notifications will be sent to all the parties related to the Change of Retailer Request as per normal notifications (i.e. FRMP, MDP, MC etc). The reason for the cancellation shall also be provided in the notification.
- (g) The affected FRMPs should determine the reason for the concurrent retail transfers and as necessary proceed to investigate who is the preferred FRMP of the End User consistent with relevant Jurisdictional requirements. The preferred FRMP should then initiate a single valid transfer Change Request.

7. CHANGE RETAILER – SMALL OR LARGE NMI

7.1. Application [1000 1010 1020 1030 1040]

Section 7 applies when one of the following Change Reason Codes applies:

Change Reason Code	Description
1000 – Change Retailer	The date of transfer is on a Prospective Day.
1010 – Change Retailer – Retrospective Align to Meter Read (SMALL only)	The date of transfer is the date of the last Meter Reading (a Retrospective Day).
1020 – Change Retailer – Retrospective – Long Term/Error (LARGE only)	The date of transfer could be a date agreed between the Current FRMP and New FRMP (a Retrospective Day) where the actual transfer date was in error. In addition, and in Victoria only, the date of transfer could be a date agreed by the Current FRMP and New FRMP (a Retrospective Day)
1030 – Change Retailer – Move-In	The date of transfer (move-in) is on a Prospective Day.
1040 – Change Retailer – Move-In – Retrospective	The date of transfer (move-in) would be on a Retrospective Day.

7.2. Conditions Precedent

- The *NMI* already exists in MSATS⁶.
- The NMI Classification Code is SMALL or LARGE.
- The date of the transfer of *retailer* from the Current FRMP to the New FRMP will be the Actual Change Date.
- The Actual Change Date is to be established in accordance with the Read Type Code submitted to MSATS by the New FRMP.

7.3. Initiating Roles

A New FRMP may initiate a Change Request to effect a change of *retailer* in accordance with section 7.4.

7.4. FRMP Requirements

The New FRMP must:

- obtain the Current FRMP's agreement to retrospectively transfer an End User on a previous Meter Reading (applies to CR1010).
- obtain the NMI Checksum.
- confirm that the *NMI* is valid for the *connection point*.
- submit a Change Request to initiate the transfer of the End User from which the New FRMP has obtained Explicit Informed Consent and provide the following information with the Change Request:

Change Reason Code	Participant Transaction ID	NMI and NMI Checksum
Its Participant ID	Proposed Change Date	New RP ⁷
Read Type Code		

⁶ If it doesn't, the *retailer* should refer to section 11 and seek LNSP action to establish a *NMI*.

⁷ This should be the Current RP if there is no change of the RP Role.

- (e) nominate itself as the New FRMP;
- (f) where the NMI Classification Code is SMALL, if advised by the New MDP or the Current MDP that a Meter Reading cannot be obtained in response to a Read Type Code for NSRD or a Special Read Date, the New FRMP must either:
 - (i) Withdraw the transfer request; or
 - (ii) Advise the MDP to read the *meter* on the NSRD or propose a Special Read Date.
- (g) where the NMI Classification Code is SMALL, if advised by the New MDP or the Current MDP that the NSRD or a Special Read Date is invalid, must either:
 - (i) advise the MDP of a valid date; or
 - (ii) withdraw the transfer request.

The Current FRMP must:

- (h) on receipt of a request from the New FRMP for an agreement to retrospectively transfer on a previous Meter Reading, respond to the request within 2 *business days*.

The New FRMP may:

- (i) populate the Change Request with the identity of the following Roles:

MPB	MPC	
-----	-----	--

or leave this to the New MC to complete.

- (j) for Change Reason Codes 1000, 1020, 1030 and 1040, if the MDP is changing, provide the following additional information:

MDP		
-----	--	--

- (k) for Change Reason Code 1020, populate the Change Request with:

Actual End Date		
-----------------	--	--

- (l) for Retrospective Changes, nominate a Proposed Change Date. The limits for Retrospective Change dates are provided in section 7.7; and
- (m) withdraw a change of *retailer* transaction request at any time until the transfer is Completed.

7.5. MDP Requirements

The MDP must:

- (n) Once the transfer has Completed, set up the *NMI* suffix(s) so that they become active on the Actual Change Date if this data is not already provided or has changed.
- (o) On receipt of a Data Request for Change Reason Codes 1000, 1010, 1030 or 1040, initiate a Change Request to provide the Actual Change Date.

If the NMI Classification Code is LARGE, the Actual Change Date must be the date nominated as the proposed date by the New FRMP unless the date nominated is inappropriate, in which case the MDP must advise the New FRMP of the reason why the proposed date is inappropriate and agree on the Actual Change Date.

- (p) For Prospective Changes that do not require a Meter Reading, provide the Actual Change Date within 2 *days* of the Actual Change Date.

- (q) For changes that require a Meter Reading, provide the Actual Change Date within 2 *days* of the Meter Reading.
- (r) For Retrospective Changes, where the Jurisdictional rules specify that an Actual Change Date is required, ensure that the Actual Change Date submitted is no earlier than the time limit specified by the Jurisdiction for the Change Reason Code on the Change Request.
For example, if the Jurisdictional timeframe for a Change Reason Code is 10 days, the Actual Change Date must be no earlier than 10 days prior to the date the Data Request was received, even if MSATS would allow an earlier date.
- (s) Where the NMI Classification Code is SMALL and the Read Type Code requires the NSRD or the Special Read Date, forward the Meter Reading taken at this time to the Current FRMP, New FRMP, and Current LNSP.
- (t) Where the NMI Classification Code is SMALL:
 - (i) the MDP must Object to the Change Request if the NSRD nominated by the New FRMP is not within two *business days* prior to, or two *business days* after, the NSRD, or the date nominated by the New FRMP for the Retrospective Change does not correspond to an Actual Meter Read Date.
 - (ii) the MDP must advise the New FRMP of the failure to take a Meter Reading within 2 days and await instructions if the next Scheduled Meter Reading or Special Meter Reading does not occur within three *business days* before, or two *business days* after, the NSRD or Special Read Date (as applicable).
 - (iii) if the Read Type Code requires an Estimated Reading, prepare the Estimated Reading and submit this to MSATS as the Meter Reading related to the Actual Change Date (not for a Retrospective Change).
 - (iv) the MDP must notify the New FRMP where the Read Type Code is not aligned with the method of Meter Reading that can reasonably be facilitated at the *metering installation* and is inconsistent with the Metering Installation Type Code.
 - (v) for Retrospective Changes on receipt of a Data Request for an Actual Change Date, provide the Actual Change Date within 2 days of receipt of the Data Request.
 - (vi) If requested by the New FRMP and allowed in that Jurisdiction, carry out an Actual Meter Reading within the time periods specified in the relevant *metrology procedure*.
- (u) Where the NMI Classification Code is LARGE, validate that the Metering Installation Type Code is identified as a type 1, type 2, type 3 or type 4 *metering installation*. If an error is identified, advise the New FRMP and await instructions.
- (v) Where the NMI Classification Code is LARGE, for Retrospective Changes that do not require a Meter Reading, provide the Actual Change Date within 2 days of receipt of the Data Request.

7.6. MC Requirements

The MC must ensure MDP, MPC and MPB roles are correct and if not raise appropriate Change Request to update it. Refer to section 30 to [36~~37~~](#) for Change Request types for Role Changes.

7.7. Timeframe Rules

When preparing a Change Request the New FRMP must choose, for the identified Change Reason Codes, a Proposed Change Date that lies between the Prospective Period and Retrospective Period, as shown in Table 7-A.

Table 7-A – Timeframe Rules

8. CHANGE RETAILER – ERROR CORRECTIONS – SMALL NMIS

8.1. Application [1021 1022 1023 1024 1025 1026 1027 1028 1029]

Please note that the appropriate Change Request for a LARGE NMI is CR 1020 – Change Retailer – Retrospective – Long Term/Error (not SMALL⁸). More information about this Change Request is provided in Section 7.

Section 8 applies to the following Change Reason Codes:

Change Reason Code	Description
1021 – Error Correction – Missed CR1500	Used where the proposed transfer date has been missed due to the MDP not being able to provide a corresponding Actual Change Date on the original Change Request (CR 1000, 1010, 1030 or 1040).
1022 – Incorrect transfer date	Used where the MDP supplies an incorrect Actual Change Date and the original Change Request (CR 1000, 1010, 1030 or 1040) was Completed on the incorrect date.
1023 – New NMI – Update/Correct FRMP on Greenfield Site	Used where the LNSP has nominated an incorrect retailer on a newly created NMI or a FRMP other than the FRMP who requested the Allocate NMI requests the supply to be connected.
1024 – Transfer missed	Used where the New Retailer failed to initiate the transfer in time. Acceptable reasons for the use of this code are: <ul style="list-style-type: none"> Where a Site has more than one <i>NMI</i> and not all of them were transferred. The error correction transaction will be used to transfer the other <i>NMI</i>(s) missed. Re-energisation of Site, with or without End User notification (End User request to <i>retailer</i>.)
1025 – Transferred in Error	Used where the Current FRMP transferred the NMI in error and requests the New Retailer to transfer it back. A wrong NMI was selected by the Current FRMP to transfer.
1026 – Cooled Off	Used where an End User signs a contract with a New Retailer. The End User then cancels the request within the Cooling-Off Period. New Retailer fails to withdraw the transfer request (transfer Pending) or was unable to do so (transfer Completed).
1027 – Customer Moves Out on or before CR completion date	Used where a End User signs a contract with a New Retailer but moves out on or before the Change Request completion date (transfer date).
1028 – Non-account holder signs contract	Used where a person other than the End User at a Site signs a contract with a New Retailer. The End User for the Site then discovers this and does not wish to transfer.
1029 – Other Error Corrections (SMALL only)	Used to correct errors caused by Participant process or systems issues; for example, late processing of contractual paperwork by initiating Participant. These may be reasons other than those covered by CR 1021 – 1028.

8.2. Conditions Precedent

- The *NMI* exists in MSATS.⁹
- The NMI Classification Code is SMALL. This section applies to the *metering installations* types 4, 4A, 5, 6, or 7.

⁸ Please note that “not SMALL” refers to LARGE, WHOLESAL, INTERCON, GENERATR or SAMPLE NMIs.

⁹ If the *NMI* does not already exist in MSATS, the *retailer* should refer to section 11 “Create a NMI” and seek LNSP action to establish the *NMI*.

- (c) The date of the transfer of *retailer* from the Current FRMP to the New FRMP will be the Actual Change Date.
- (d) The Actual Change Date is to be established in accordance with the Read Type Code submitted to MSATS by the New FRMP.

8.3. Initiating Roles

A New FRMP may initiate a Change Request to effect a change of *retailer* in accordance with section 8.4.

8.4. FRMP Requirements

The New FRMP must:

- (a) Obtain the NMI Checksum.
- (b) Confirm that the *NMI* is a valid *NMI* for the *connection point* prior to the Initiation of a Change Request.
- (c) Submit a Change Request to initiate the transfer of the End User from which the New FRMP has obtained Explicit Informed Consent.
- (d) Confirm that the *NMI* is a greenfield site and has never had a *metering installation* installed at the *connection point*.(applies to CR1023).
- (e) Populate the Change Request with the following information:

Change Reason Code	Participant Transaction ID	<i>NMI</i> and NMI Checksum
Its Participant ID	Proposed Change Date	Read Type Code

- (f) Nominate itself as the New FRMP.

The New FRMP may:

- (g) Populate the Change Request with the identity of the following Roles:

RP	MPB	MPC
MDP		

or leave this action to the New MC to complete.

- (h) Populate the Change Request with:

Actual End Date

8.6. MC Requirements

The MC must ensure MDP, MPC and MPB roles are correct and if not raise appropriate Change Request to update. Refer to section 30 to [36363637](#) for Change Request types for Role Changes.

8.7. Timeframe Rules

When preparing a Change Request, the New FRMP must choose, for the identified Change Reason Codes, a Proposed Change Date that lies between the Prospective Period and Retrospective Period, as shown in the Table 8-A.

9. CHANGE RETAILER – EMBEDDED NETWORKS – SMALL OR LARGE

9.1. Application [1080 1081 1082 1083 1084]

Section 9 applies when one of the following Change Reason Codes applies:

Change Reason Code	Comment
1080 – Change Retailer – Child NMI	The date of transfer is a Prospective Change.
1081 – Change Retailer – Child NMI – Retrospective Align Meter Read	The date of transfer would be the date of the last Meter Reading (a Retrospective Change).
1082 – Change Retailer Child – Retrospective: Long Term/Error	The date of transfer could be a date agreed by the current and New FRMP (a Retrospective Change) where the actual transfer date was in error. In addition, and for Victoria only, the date of transfer could be a date agreed by the Current FRMP and New FRMP (a Retrospective Change) to which both parties agree that the transfer should have been effected.
1083 – Change Retailer Child NMI – Move-In	The date of transfer (move-in) would be on a Prospective Day.
1084 – Change Retailer Child NMI – Move-In – Retrospective	The date of transfer (move-in) would be a Retrospective Day.

9.2. Conditions Precedent

- The *NMI* exists in MSATS.¹⁰
- The NMI Classification Code is SMALL or LARGE.
- The date of the transfer of *retailer* from the Current FRMP to the New FRMP will be the Actual Change Date.
- The Actual Change Date is to be established in accordance with the Read Type Code submitted to MSATS by the New FRMP.

9.3. Initiating Roles

A New FRMP may initiate a Change Request to effect a change of *retailer* in accordance with section 9.4.

9.4. FRMP Requirements

The New FRMP must:

- Obtain agreement from the Current FRMP to retrospectively transfer an End User on a previous Meter Reading (applies to CR1081).
- Obtain the NMI Checksum from an approved source.
- Confirm that the *NMI* is a valid *NMI* for the *connection point* prior to the Initiation of a Change Request.
- Submit a Change Request to initiate the transfer of the End User for which the New FRMP has obtained an Explicit Informed Consent.
- Populate the Change Request with the following information:

Change Reason Code	Participant Transaction ID	NMI and NMI Checksum
--------------------	----------------------------	----------------------

¹⁰ If it doesn't, the *retailer* should refer to section 12 and seek ENM action to establish the *NMI*.

Its Participant ID	Proposed Change Date	New RP ¹¹
Read Type Code		

- (f) Nominate itself as the New FRMP.
- (g) Where the NMI Classification Code is SMALL, if advised by the New MDP or Current MDP that a Meter Reading cannot be obtained in response to a Read Type Code for NSRD or a Special Read Date, must either:
- (i) Withdraw the transfer request; or
 - (ii) Advise the MDP to read the meter on the NSRD or propose a Special Read Date.
- (h) Where the NMI Classification Code is SMALL, if advised by the New MDP or Current MDP that the NSRD or a Special Read Date is invalid, must either:
- (i) Advise the MDP of a valid date; or
 - (ii) Withdraw the transfer request.

The Current FRMP must:

- (i) on receipt of a request from the New FRMP for an agreement to retrospectively transfer on a previous Meter Reading, respond to the request within 2 *business days*.

The New FRMP may:

- (j) Populate the Change Request with the identity of the following Roles:

MPB	MPC	
-----	-----	--

or leave this action to the New MC to complete.

- (k) For Change Reason Codes 1080, 1081, 1082, 1083 and 1084, if the MDP is changing, populate the Change Request with the following additional information:

MDP		
-----	--	--

- (l) For Change Reason Code 1082, populate the Change Request with:

Actual End Date		
-----------------	--	--

- (m) Nominate, in accordance with paragraph (e), a Proposed Change Date. The time limits for Retrospective Changes are provided in section 9.7.
- (n) Withdraw a change of *retailer* transaction request at any time until the transfer is Completed.

9.5. MDP Requirements

The MDP must:

- (a) Once the transfer has Completed, set up the *NMI* suffix(s) so that they become active on the Actual Change Date.
- (b) On receipt of a Data Request for Change Reason Codes 1080, 1081, 1083 or 1084, Initiate a Change Request to provide the Actual Change Date.
- (c) Where the NMI Classification Code is LARGE, it must be the date nominated as the proposed date by the New FRMP unless the date nominated is inappropriate, in which case the MDP must advise the New FRMP of the reason why the proposed date is inappropriate and mutually agree on what the Actual Change Date should be.

¹¹ This should be the Current RP if there is no change or RP role.

- (d) If the Read Type Code does not require a read, validate that the Metering Installation Type Code is identified as a type 1, type 2, type 3 or type 4 *metering installation*. If an error is identified, advise the New FRMP.
- (e) For Prospective Changes that do not require a Meter Reading, provide the Actual Change Date within 2 days of the Actual Change Date being reached.
- (f) For Retrospective Changes that do not require a Meter Reading, provide the Actual Change Date within 2 days of receipt of the Data Request.
- (g) For Retrospective Changes, ensure that the Actual Change Date submitted is no earlier than the time limit specified by the Jurisdiction for the Change Reason Code on the Change Request.

For example, if the Jurisdictional timeframe for a Change Reason Code is 10 days, the Actual Change Date must be no earlier than 10 days prior to the date the Data Request was received, even if MSATS would allow an earlier date.
- (h) For changes that require a Meter Reading, provide the Actual Change Date within 2 days of the Meter Reading.
- (i) Where the NMI Classification Code is SMALL, where the Read Type Code requires the NSRD or the Special Read Date, forward the Meter Reading taken at this time to the Current FRMP, New FRMP, Current ENLR.
- (j) Where the NMI Classification Code is SMALL, if the NSRD or Special Read Date nominated by the New FRMP as the proposed date is not within a date range that is two *business days* prior to or two *business days* subsequent to the Scheduled Reading Date, or the date nominated by the New FRMP for the Retrospective Change does not correspond to a read date, the MDP must Object to the Change Request.
- (k) Where the NMI Classification Code is SMALL, if the next Scheduled Meter Reading or Special Meter Reading does not occur within a date range that is three *business days* before or two *business days* after the Special Read Date or NSRD the MDP must advise the New FRMP of the failure to take a Meter Reading within 2 *days* and await instructions from the FRMP.
- (l) Where the NMI Classification Code is SMALL, if the Read Type Code requires an Estimated Reading, prepare the Estimated Reading and submit this to MSATS as the Actual Change Date.
- (m) Where the NMI Classification Code is SMALL, if the Read Type Code requires an End User Meter Reading, obtain it from the New FRMP and submit this value to MSATS as the Actual Change Date (only if allowed by the Jurisdiction).
- (n) If the NMI Classification Code is SMALL, for Retrospective Changes, where the Meter Reading occurred prior the Change Request being submitted, provide the Actual Change Date 2 days of receipt of the Data Request.
- (o) If the NMI Classification Code is SMALL, if requested by the New FRMP, carry out an Actual Meter Reading within the time periods specified in the *metrology procedure* (only if allowed by the Jurisdiction).

40. AEMO ONLY – CHANGE ROLE, TNI OR DLF CODE – BULK CHANGE TOOL (BCT) – SMALL, ~~OR~~ LARGE OR NCONUML

40.1. Introduction

- (a) This is a special transaction undertaken by AEMO in limited circumstances, such as when a RoLR Event occurs as it is designed to manage bulk changes of Participant IDs, TNI Codes or DLF Codes.
- (b) The BCT can only be used by AEMO.
- (c) Section 40 covers changes to the following *NMI Standing Data* items:

LNSP	LR	FRMP
MDP	MPB	MPC
RP	RoLR	TNI Code
DLF Code		

- (d) Access rights to the BCT function are restricted and will only be available to a person nominated by AEMO.
- (e) When activated, BCT will use a unique Change Reason Code to update the data specified in the BCT request by AEMO.
- (f) When the BCT is used, active Change Requests may be Cancelled.
- (g) A BCT following a RoLR Event will change the identity of the Current FRMP in the NMI Master Record to the Participant ID of the Participant that the relevant Regulator has nominated to undertake the RoLR function. (Note the BCT does not use the information specified in the RoLR role against the *NMI*).
- (h) Where necessary, the BCT RoLR action will change the identity of the parent LR on the Child NMIs, provided these have been set up correctly in MSATS.
- (i) Notification of a change to the NMI Master Record as in accordance with the Change Request Status Notifications Rules.
- (j) Responsibilities for requesting, authorising and implementing use of the BCT will be as per Table 40-A.

Table 40-A – Request/Authorise/Implementation Scenarios

Scenario	Request	Authorise	Implement
Mergers & Acquisitions	Participants	AEMO	AEMO
TNI & DLF Code updates	Participants	AEMO	AEMO
RoLR Events	Relevant Regulator	AEMO	AEMO
Any other scenario	Jurisdictions/Participants	AEMO	AEMO

40.2. Conditions Precedent

- (a) For all events:
 - (i) The *NMI* exists in MSATS.
 - (ii) The Effective Date of the BCT Change Requests shall always be retrospective.
 - (iii) The *NMI* can be any NMI Classification Code.

- (iv) AEMO has agreement on requirements and details from all parties impacted (except for RoLR Event).
- (v) The use of the BCT functionality is not dependant on the provision of any Meter Readings at the effective date.
- (b) RoLR Events:
See NEM ROLR Processes
- (c) Mergers & Acquisitions
The Participant IDs involved must have the same ABN and the same Jurisdictional licences.

40.3. Requesting Participant Requirements

Where Table 40-A indicates that a Participant may request the use of the BCT, the requesting Participant must:

- (a) Provide at least one data item (data field) for change.
- (b) Specify the Start and End Date (if required) for the BCT process.
- (c) Ensure that all changing data items are active for the whole of the time period specified for the BCT.
- (d) Ensure all impacted Participants are consulted and have provided approval for change to AEMO.
- (e) Specify the notifications to be sent out for the BCT process.
- (f) Specify the action required to be taken when a conflicting Change Request is found for the *NMIs* in the BCT process.
- (g) Provide the selection criteria for *NMIs* to be included in the BCT from the following fields:

LNSP	LR	FRMP
MDP	MPB	MPC
RP	RoLR	TNI Code
DLF Code	Post Code	Aggregate Flag
NMI Status Code	NMI Classification Code	Jurisdiction Code
Parent Name (ID or "if null" or "if not null")	Child Name (ID or "if null" or "if not null")	The Tier Status (not required if both the LR and FRMP are provided as selection criteria)
<i>NMI</i> Limit (Maximum number of <i>NMIs</i> to be processed in the run)	Previous BCT run identifier (i.e. Change all <i>NMIs</i> in a previous BCT event)	

- (h) Nominate at least one of the following information for change via the BCT:

LNSP	LR	FRMP
MDP ⁽¹⁾	MPB ⁽¹⁾	MPC ⁽¹⁾
RP	RoLR	TNI Code
DLF Code		

Note(1): The requesting Participant must be the MC to nominate the MDP, MPB and MPC Roles.

The requesting Participant may further specify a list of *NMIs* to be used as part of the selection criteria.

40.4. Impacted Participant Requirements

Impacted Participants must:

- (a) Provide AEMO acceptance or rejection of the criteria set by the requesting Participant for use with the BCT.
- (b) Where rejecting the criteria set by the requesting Participant for use with the BCT, provide AEMO a reasonable justification for the rejection.

40.5. MDP Requirements

The MDP must update the activity status of any affected Datastreams via normal Change Request processes.

40.6. Timeframe Rules

- (a) The BCT can only be used to make Retrospective Changes.
- (b) The Timeframe Rules that apply to the appropriate Change Reason Code that would normally have applied will apply to BCT changes.

40.7. Objection Rules

Objections are not permitted.

40.8. Change Request Status Notification Rules

The Change Request Status Notification Rules are configurable to suit the changes being made. In each case these will need to be specified by the Initiating Participant. For all events, only COM notifications will be provided.

41. ACCESS TO CATS STANDING DATA

41.1. Introduction

- (a) This section provides the rules for access to CATS Standing Data through MSATS.
- (b) Separate rules apply to CATS Standing Data that is available for NMI Discovery Search and CATS Standing Data that can be accessed by Participants with a relationship to a *NMI*.
- (c) *NMI Standing Data* for NMI Discovery Search is the specified sub-set of CATS Standing Data identified in [Table 41-A](#), [Table 41-C](#), [Table 41-I](#) and [Table 41-J](#).
- (d) The entire set of CATS Standing Data is identified in [Table 41-D](#), [Table 41-E](#), [Table 41-F](#), [Table 41-G](#) and [Table 41-H](#).

41.2. Participant

- (a) In accordance with Jurisdictional requirements, a Participant may seek access to *NMI Standing Data* from MSATS as set out in section [41.3.1](#) for the purpose of identifying the *NMI* attributes assigned to a *connection point* or as otherwise permitted by the Jurisdiction.
- (b) If agreed with a potential End User, a Participant may seek access to *NMI Standing Data* from MSATS in accordance with section [41.3.2](#) for the purpose of identifying the *NMI Standing Data* assigned to a *connection point* or as otherwise prescribed by the Jurisdiction.
- (c) A Participant may seek access to *NMI Standing Data* from MSATS in accordance with section [41.3.4](#) only for the purpose of:
 - (i) Identifying the Current FRMP so the End User can be referred to them in order to arrange abolishment of the *NMI* from MSATS;
 - (ii) Identifying the Current FRMP to advise that an error correction transfer (CR 1021, 1023, 1024 and 1029) will be raised;
 - (iii) Identifying the Current FRMP to obtain agreement to raise a transfer CR 1010 – a Retrospective Change to align to Meter Reading;
 - (iv) Identifying the most recent previous FRMP to arrange with them to raise a transfer in order to win back a *NMI* transferred in error. (CR 1022, 1025, 1026, 1027 and 1028).
- (d) A Current Participant is provided with access to CATS Standing Data in MSATS in accordance with [Table 41-D](#), [Table 41-E](#), [Table 41-F](#), [Table 41-G](#), [Table 41-H](#), [Table 41-I](#) and [Table 41-J](#).
- (e) For the purpose of this section, a reference to a:
 - (i) Participant;
 - (ii) *retailer*; or
 - (iii) FRMP,
 is also a reference to a *Customer's Disclosee* under section 8.6.2(b1) of the Rules.
- (f) An MC may seek access to *NMI Standing Data* from MSATS in accordance with section [41.3.5](#) only for the purpose of identifying the *NMI Classification* of 'LARGE' in order to arrange a change of MC.

41.3. Request a NMI Discovery Search

- (a) The following access to CATS Standing Data is available to a Participant in MSATS:
 - (i) NMI Discovery Search 1;
 - (ii) NMI Discovery Search 2 – *NMI Standing Data*;
 - (iii) CATS Standing Data;
 - (iv) NMI Discovery Search 3 – *NMI Standing Data*.
- (b) NMI Discovery Search 1 is used by a Participant to identify the *NMI* characters that have been assigned to an End User's *connection point*, as described in section 41.3.1.
- (c) NMI Discovery Search 2 is used by a Participant to identify the *NMI Standing data* that has been assigned to the End User's *connection point* and is available for release in accordance with NMI Standing Data Access Rules, as provided in section [41.3.2](#)/[41.3.2](#).
- (d) The CATS Standing Data Access Rules are contained in section [41.3.3](#)/[41.3.3](#).
- (e) A NMI Discovery Search 1 will only be successful if information is contained in MSATS that supports one of the following three options: DPID, Meter Serial ID and address.
- (f) NMI Discovery Search 3 is used by *retailers* to progress error correction CRs, identify the previous FRMP, or for seeking agreement to the raising of a retrospective align with meter read transfers.

41.3.1. NMI Discovery Search 1 – NMI Search Rules

- (a) The NMI Search Rules define what search parameters can be used in a Jurisdiction.
- (b) The available *NMI* search options are:
 - (i) DPID;
 - (ii) Meter Serial ID;
 - (iii) Address (without DPID).
- (c) Any or all of these options can be activated. Activation is in the ascending order shown in paragraph (b).
- (d) If a search is carried out using the address option, the state and locality (or state and postcode) must also be provided.
- (e) If a search is carried out using Meter Serial ID the state, locality and postcode are not required.
- (f) The address information can be either structured or unstructured. If a search is carried out using the address option only all input information is expected in the structured format as the first level of search. If this level of search is not successful, a second search on unstructured format will be undertaken by MSATS.
- (g) If a NMI Master Record does not contain DPID or address information, the *NMI* search will only be successful if a Meter Serial ID is provided as a search option.
- (h) MSATS identifies a unique *metering installation*. The *metering installation* may be co-located with a postal delivery point but there will be instances where the *metering installation* has no postal delivery point. In recognition of this variation, MSATS enables the Participant to enter in either a structured or an Unstructured Address. The Unstructured Address should not contain state and postcode information.

- (i) The NMI Search Rules also define how many matches will be returned in the case of multiple matches.
- (j) If a match occurs, MSATS will return to the Participant the following:
