

Dear AEMO,

I am suggesting that AEMO GenCost takes into account large scale nuclear as well as SMRs. While there is currently a ban on nuclear, it would serve to provide a real assessment of all options.

No where in the Western World has renewable energy (RE) wind and solar lead to a reduced cost of electricity to consumers when in reality power prices have all risen significantly.

You should be providing comparisons of all generating options otherwise I feel you are not doing your job properly.

Regards
Stan Moore
