CDR in Energy Peer-to-Peer Model

How does the P2P data access model work?

CDR in Energy has designated AEMO as a Data Holder to enable consumers to share their information on Distributed Energy Resources and historical Electricity usage that may not be available to the current Retailer. To facilitate this outcome the CDR data access model differs from the economy-wide model to allow for the fact that AEMO does not have the information to manage consumer consent.

1. The consumer consents to an accredited data recipient (ADR) obtaining their data.
2. The ADR contacts the retailer Data Holder (DH), seeking access to the consumer's data.
3. The retailer DH authenticates the ADR using the CDR Register.
4. The consumer is redirected to the retailer DH's authentication and authorisation service. The retailer DH authenticates the identity of the consumer via a one-time password. The Consumer authorises the retailer DH to disclose their data to the ADR.
5. The ADR requests a specific set of data that is covered by the authorisation.
6. The retailer requests the relevant data, covered by the authorised consent, from AEMO as a data holder (AEMO DH). AEMO DH provides the requested data to the retailer DH. The retailer may also obtain relevant data from its own data holdings.
7. The consumer's data is shared between the retailer DH and the ADR.
